

**UNIVERSITY OF DHAKA
BANGLADESH**

**DETAILED GUIDE LINES AND SYLLABUS
FOR
B.Sc. IN LEATHER-PRODUCTS ENGINEERING
(FOUR YEARS COURSE)**

FIRST YEAR

Approved by Academic Council
University of Dhaka

**Institute of Leather Engineering and Technology
University of Dhaka, Hazaribagh, Dhaka-1209.**

RULES AND REGULATIONS APPLICABLE FOR
INSTITUTE OF LEATHER ENGINEERING AND TECHNOLOGY
DEPARTMENT : LEATHER PRODUCTS ENGINEERING

A. ACADEMIC RULES

1. The Institute of Leather Engineering and Technology (ILET), Hazaribagh, Dhaka shall be deemed to be an institute of the University of Dhaka.
2. The degree to be awarded by the University of Dhaka shall be designated as B. Sc. in Leather Products Engineering.
3. The Courses for the B. Sc. in Leather Products Engineering shall extend over four academic years.
4. The medium of instruction and examination shall be in English.
5. Every year there will be an admission test for new intakes. The rules and regulations and other necessary works for the admission purpose will be performed by the central admission committee of the University.
6. Candidates for admission to the first year B. Sc. in Leather Products Engineering shall be required to have passed the Higher Secondary Certificate in Science with Physics, Chemistry and Mathematics or its equivalent from a recognized Board or Institution. Foreign students with requisite qualification may be admitted with the approval of the University of Dhaka.
7. Admission to the first year B. Sc. in Leather Products Engineering programme shall be based on the results of S.S.C. and H.S.C. or its equivalent examinations and the admission test to be conducted based on current rules by the Central Admission Committee.
8. The detail syllabus for degree of Leather Products Engineering shall be approved by Academic Council of the University of Dhaka.
9. An Examination Committee for each year consisting of 4 (four) members of which 3 (three) shall be internal and 1 (one) from other departments of the Institute or the university or research organization shall be constituted by the departmental academic committee. Any full time teacher of the concerned department of the institute shall be the chairman of the Examination Committee.
10. There shall be a Departmental Academic Committee consisting of all the full-time teaching staff to help academic matters.
11. Every year before the commencement of Academic session the list of part time teachers (if required) shall be prepared course wise and must be approved by the dean of the concern Faculty of Dhaka University. Dean will have the right to modify the list with the consultation with the concern head of the department and the Director of the institute.

12. The question paper setters and the examiners will be selected by the Examination Committee from a panel approved by the University.
13. The question papers shall be moderated by the Examination Committee.
14. No candidate shall be eligible for degree of B. Sc. in Leather Products Engineering unless he or she has undergone the approved courses of study for a minimum period of four academic years and maximum of six academic years.
15. There shall be 15, 1-class hour lectures for 1 credit of theory classes. There shall be 30 hour lectures for 1 credit of Practical classes. Each of the class duration is 50 minutes.
16. No student shall be allowed to study any other degree programme during his/her study in Institute of Leather Engineering and Technology.

B. CURRICULUM AND EXAMINATION RULES

17. The subjects to be studied and the scheme of examinations for B. Sc. in Leather Products Engineering courses are given in Annexure-A.
18. There shall be a final examination at the end of each academic year to be conducted by the University of Dhaka.
19. Two examiners, of whom one will be the course teacher and the others, shall be from other departments of the Institute or University or research organization. The average of two will be taken as final. In case of the difference of more than 20% marks between the two examiners, the script/scripts will be evaluated by a third examiner appointed by the Examination Committee from the approved panel and the average of nearest two marks will be taken as final. In the case of equal difference between the marks of three examiners the middle marks will be taken as final.
20. Final practical examinations will be conducted jointly by Four examiners, 3 (three) internal and 1 (one) external appointed by the examination committee.

21. Grades and grade points will be awarded on the basis of marks obtained in the written, oral or practical examinations and/or laboratory performance according to the following scheme:

Marks Obtained (%)	Grade	Grade Point
80-100	A ⁺	4.0
75-79	A	3.75
70-74	A ⁻	3.50
65-69	B ⁺	3.25
60-64	B	3.00
55-59	B ⁻	2.75
50-54	C ⁺	2.50
45-49	C	2.25
40-44	D	2.00
Marks Obtained (%)	Grade	Grade Point
<40	F	0.00
	I	Incomplete
	W	Withdrawn

A student obtaining 'D' or higher grade will be counted as credits earned by him/her. A student obtaining 'F' grade will not be counted towards his earned credits.

The GPA (grade point average) will be calculated according to the following formula:

$$\text{GPA} = \frac{\sum (\text{Grade points in a course} \times \text{Credits for the course})}{\text{Total credits taken}}$$

CGPA = Cumulative GPA for different years.

22. The total performance of a student in a given course is based on continuous assessment and course final examinations.

- (i) For theory courses the assessment is made through in-course assessment, and final examinations;
- (ii) The assessment of laboratory and / or field courses will be made through observation of the student at work, viva-voce, assignments and evaluation of practical reports.

An examination committee for each year shall be constituted at the beginning of the session.

The distribution of marks for a course will be as follows:

(a) Theory courses:

In-course assessment: 30% of total marks shall be taken as in-course assessment. 5% marks will be awarded on the basis of attendance as follows:

90% and above	5%
85% to less than 90%	4%
80% to less than 85%	3%
75% to less than 80%	2%
60% to less than 75%	1%
Less than 60%	0 (Zero)

- (ii) Course final examination 70% of total marks
- (iii) Continuous assessment 40% of total marks for practical courses
- (iv) Practical Final Examination 60% of total marks

(b) In-course assessment for theory courses: In-course assessment will be done by taking class tests.

- (i) Maximum duration of in-course tests will be one class hour.
- (ii) Questions for in-course tests may preferably be of multiple choice (MCQ) type. Students may also be evaluated using short questions as decided by the course teacher.
- (iii) At least one test for 2 credits hour courses and two tests for 3 or 4 credit hour courses will be taken.
- (iv) Course teachers must announce results within 4 weeks of holding the examination.
- (v) The course teacher will show the assessed in-course scripts to the students.
- (vi) Marks for in-course assessment must be submitted by the course teacher to the Chairman of the Examination Committee and Controller of Examinations before holding the final examination.

(c) Continuous assessment for Practical courses: Continuous assessment will be done on the basis of class performance, report writing and class attendance.

(d) Year-final examination (Theory & Practical courses):

- (i) Student having attendance 75% or more (Collegiate) are eligible to appear in the final examination.
- (ii) Students having attendance 60-74% are eligible for sitting in the final examination on payment of fees as decided by the University.
- (iii) Student having attendance less than 60% are not allowed to sit in the final examination.
- (iv) The year final examination will be conducted centrally by Controller of examinations as existing system.

(v) The duration of theoretical examinations will be follows:

Credit	Duration of theory examinations
4 credit theory course	4 hours
3 credit theory course	3 hours
2 credit theory course	2.5 hours

- (vi) Duration of practical examinations will be from 4-6 hours irrespective of credit hours.
- (vii) For final examinations, there will be two examiners: first examiner will be one of the course teachers and the second examiner will be other departments of the Institute or University or Research organization. Evaluation will be made under the existing rule.
- (viii) Marks for final examination will be evaluated by broad and short answer questions. Practice of giving options should be avoided as far as possible.

23. A student has to take the required courses for a particular year, appear at the annual examination and score a minimum specified GPA/CGPA to be promoted to the next year.

Promotion to the next year will be given if a student scores minimum GPA/CGPA as follows:

1 st year to 2 nd year:	GPA	2.00	(D)
2 nd year to 3 rd year:	CGPA	2.25	(C)
3 rd year to 4 th year:	CGPA	2.25	(C)

24. The requirements for the award of the Bachelor of Engineering degree are as follows of the Department:

- (i) Completion of the courses for the minimum required credits in a maximum period of six academic years;
- (ii) Appearing at the final examination in all the required courses;
- (iii) Scoring a CGPA of 2.5, after considering the grades of improvement Examinations.

25. A student must complete his/her studies for a Bachelor's Degree within a maximum period of six academic years.

26. Improvement/retake will be followed by:

(i) If students obtain a grade C+ or lower in a course in any year, he/she will be allowed to repeat the term-final examination only once with the following batch for the purpose of grade improvement, but he/she will not be eligible to get a grade better than 'B+' in such a course. A student failing to improve his/her grade in a course can retain the earlier grade.

- (ii) Grade improvement will not be allowed in those courses in which a student obtains grade better than 'C+'.
- (iii) A student will be allowed to repeat a maximum of 20 credits in four years B.Sc. Program for grade improvement purpose.
- (iv) Improvement Examination will be taken only for term-final test. No improvement examination will be taken for in-course, practical course, field work, assignment and oral presentation.

27. (i) A course in which a student has obtained 'D' or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained 'F' grade will not be counted towards his earned credits.

- (ii) A student who obtains 'F' grade in a course will be allowed to improve the grade two times with any following batches with a condition that he/she has to complete the Bachelor of Engineering Program within period of 6(six) academic years from the date of first admission.
- (iii) 'F' grade will not be counted for GPA calculation. But will stay permanently on grade sheet and Transcript. When a student will repeat a course in which he/she previously obtained 'F' grade, he/she will not be eligible to get grade better than 'B+' (grade point 3.25) in such a course.

28. Readmission will be followed by:

- (i) A student may seek re-admission provided he/she has at least 30% attendance in the present year and may continue studies as a regular student.

(ii) On re-admission grade earned earlier by a student in the class of re-admission shall in general cease to exist and the student has to retake all courses and examination but in case if they do not get the opportunity to repeat the courses due to late admission, marks of in-course assessment and laboratory performance assessment in the previous year may be retained by the students.

29. Drop out will be followed by:

A student failing to earn the yearly GPA for promotion from one year to next year after taking improvement / readmission in any year shall be dropped out of the program.

30. Dean's Award will be followed by:

As a recognition of excellent performance, the names of students obtaining an average CGPA of 3.75 or above in an academic year without appearing any improvement examination may be Published in the list of Dean's award of the Faculty.

31. The failed candidates may seek readmission into the concerned classes on payment of usual fees except university registration fee or may appear in the concerned examination irregular candidates provided they have passed in all practical subjects on payment of examination and center fees as fixed by the University. The marks obtained by the irregular candidates in the practical examinations; in-course assessment and the project work (if applicable) in the earlier session shall be counted in deciding the results of their examinations.

32. The University may from time to time revise, amend or change rules and regulations and scheme of examinations and syllabus. In the case of students already undergoing the course, the changes will take effect from the beginning of the following academic year after the changes are introduced and shall cover the part of the courses that remain to be completed.

33. In the case of any dispute in interpretation of the rules and regulations regarding the degree programme of B.Sc. in Leather Products Engineering, the decision of Academic Council of the University of Dhaka shall be final.

LPE-101: MANUFACTURING TECHNOLOGY OF LEATHER-PRODUCTS-I

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Leather, hides and skin. Tanning process, vegetable tanning, oil tanning, mineral tanning, chrome tanning, dyeing, types of finishing, physical characteristics of different types of leather. Different parts and their properties of leather

Historical background & development of leather-products: Introduction, history of leather products, fashion, aspect of fashion, types of fashion, cultural influence in fashion, design, norms of design, leather products as apparel, types of leather product, specific leather for manufacturing of specific leather products, classification of leather goods.

Tools and equipment for leather-products manufacture: Introduction, cutting tools-knives rulers, shears or scissors, skiver, hammer, mallet, wooden block, engraving tools, stitching awl, masking tape, polisher, sander, nails, escutcheon pins, or tacks, hand saws, drill, rubber gloves, jewer's pliers, snap setter, rotary punch, drive punches, swivel knife, overstretch tool, dauber, awl, miter box, C-clamps, edge beveller, chisels, specific function of tools, other tools and equipment for modern leather-products manufacturing.

Pattern making: Introduction, Concept of pattern making, Classification of pattern, Indication of pattern, Copied pattern, commercial pattern, Ready to wear garments pattern, Transferring the pattern, free hand drawing, 3D-2D concept, allowance, two dimensional drawing, pattern making for hand bags, personal leather goods and belts. raw materials, tools and equipments. Rectangular pattern cutting, circular pattern cutting, different shaped Pattern making. Pattern joining.

Cutting operations for leather products : Introduction. Automatic cutting, defining cutting operations, Classifying cutting systems for leather goods, manual die cutters, NC die cutters,, automatic die cutters, universal die cutters, advantages of automatic die cutting systems, die-less cutting system, specifications and architecture of cutting systems. advantages of continuous cutting systems, special cutting procedure for certain leather products .works to be done before cutting, during cutting and after cutting, qualification of a good cutter, pattern placement. cutting norms, wastage determination, types of wastage, principle of hand cutting, straight line, broken line cutting, advantage and limitation of cutting techniques used for the production of leather-products.

Splitting: Introduction, types and techniques of splitting, parts and function of splitting machine. Trouble shooting of splitting, procedure of splitting, process control of splitting, acceptance criteria of splitting. thickness adjustment, sharpening of blade, control during splitting and skiving.

Skiving : Introduction, types of skiving, parts and function of skiving machine. Trouble shooting of skiving, procedure of skiving, process control of skiving, acceptance criteria of skiving. Thickness adjustment, angular cutting, sharpening of bell knife. Adjustment of bell knife and pressure foot.

Hand stitching: Introduction, type of hand stitching, stitch marker, sewing needles, lacing needle, thimble stitching awl, thread, pliers, techniques of hand stitching.

LPE-102: MANUFACTURING TECHNOLOGY OF LEATHER-PRODUCTS-I PRACTICAL

Class per week	Credit	Marks
2	4	Continuous assessment : 40, Course final examination 60

Introduction of tools and their uses and tooling techniques.

Hand cutting Exercise on pattern paper:

Cutting practice with hand knife on Cutting Practice Sheet 01, Cutting Practice Sheet 02, Cutting Practice Sheet 03, Cutting Practice Sheet 04, Cutting Practice Sheet 05, Cutting Practice Sheet 06, Cutting Practice Sheet 07 and Cutting Practice Sheet 08.

Hand Cutting Practice on Synthetics/ Artificial Leather/ Coated fabrics:

Cutting practice on synthetics/ artificial leather/ coated fabrics with different types tin pattern and templates.

Machine Cutting Practice on Synthetics/ Artificial Leather/ Coated fabrics/Leather:

Cutting practice on synthetics/ artificial leather/ coated fabrics/leather with different types of single edge and double edge dies.

Introduction on different types of sewing machine and its parts and function.

Introduction on sewing machine needle, its parts and function.

Sewing Practice on different shaped line of supplied paper without thread with various machine.

Sewing Practice on different shaped figure of supplied paper/ synthetics/leather with thread.

Upper Preparation:

Skiving- open raw edge skive, close raw edge skive, lapped skive, folded skive, lasting skive, corner skive, matrix skive, splitting, eyeleting, embossing, perforating.

Edge treatment:

Raw edge, Burnishing, Edging, Folding/Beading (convex curve, concave, curve)

Binding: i) English/U-Binding/Slipper binding/Flat Binding/channel binding. ii) French/Paris/Hand turnover binding iii) Italian Binding.

Slip beading, Bagged edge/Rolled Top line, Ghillie top line, collars, gimping and punching.

Seams:

Closed seam-plain closed seam, Brooklyn seam, French/Silked seam, Reversed Closed Seam, Welled seam, piped seam, Blind seam, Lapped seam-simple, welled ,piped.

Decorative seam: i) cable stitching. ii) Glove iii) Fancy and mock stitching.

Joining techniques: Hand stitching, thong or lacing technique, button or repeat attaching.

Pattern cutting: Introduction of pattern cutting technique, consideration of allowance, lining construction, working pattern making.

LPE-103: PHYSICAL CHEMISTRY

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Dilute solution: Colligative properties- lowering of vapor pressure, elevation of boiling point, depression of freezing point, osmotic pressure and osmosis, deduction of their chemical formula & molecular weight from Raoult's Law, their experimental determination.

Thermodynamics: Work, heat, energy, internal energy and enthalpy, some thermodynamic terms, first law of thermodynamics, reversible and irreversible processes, isothermal and adiabatic expansion of ideal gas, molar heat capacity at constant pressure and constant volume and their relation, second law of thermodynamics, spontaneous process, entropy, entropy changes for ideal gas, Carnot's cycle, free energy and work function, Gibbs-Helmholtz's equation.

Photochemistry: Laws of photochemistry, quantum yield, decomposition of hydrogen halide, photosensitized reaction, fluorescence and phosphorescence, luminescence, chemiluminescence.

Surface chemistry: Adsorption, de-sorption and absorption, physical and chemical adsorption, types of adsorption isotherms, adsorption of gas by solid, adsorption of solid from solution, application adsorption.

Colloid: Classification, general methods of preparation and purification, general properties (Physical, colligative, kinetic, optical and electrical properties) of sol, protective action and application of colloid, emulsion, types and preparation of emulsion, emulsifier, stability of emulsions.

Chemical kinetics: Rate of reactions, order and molecularity, determination of order of reactions, temperature dependence of reaction rate, simple theories of reaction rate, energy of activation, collision

theory of reaction rates, complex reactions: (i) reversible or opposing reactions, (ii) side reactions or parallel reactions, (iii) consecutive reactions.

pH and its determination : pH and buffer solutions, standard buffers, methods of determining the pH, accuracy of pH measurements, colourimetric determination of pH, universal indicators, potentiometric determination of pH, hydrogen electrode as pH indicating electrode, advantages and disadvantages of hydrogen electrode, glass electrode as pH indicating electrode, factors affecting pH measurements with the glass electrode, advantages and disadvantages of glass electrode, pH meters- potentiometric, portable pH meters.

17. Joseph H. Noggle- Physical Chemistry.
18. M. Mahbulul Haque & M. Ali Nawab- Principle of Physical Chemistry.

LPE-105: INORGANIC CHEMISTRY

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Periodic classification: Periodic classification of the elements, general survey of the elements including transition and rare earth elements, periodic nature as related to atomic structure, group properties, periodic nature of some important properties.

Oxidation and reduction reaction: Classification of chemical reactions with special reference to oxidation and reductions, oxidation number and oxidation state, difference between oxidation number and valance, oxidizing agent and reducing agent, equations involving oxidation- reduction reactions.

Acid-Base concept: Early concepts, Arrhenius concept, Bronsted-Lowry concept of acid and bases, Lewis acids and bases, acid and base strength, pH and pK scale, buffer solution and its mechanism, hard and soft acids and bases, acid base indicator.

Transition metal: General chemistry of transition elements with reference to Chromium, Titanium, Zinc, Iron, Cadmium, Nickel, Cobalt, chemical natures and application with special reference to leather production.

Co-ordination chemistry: Coordination or complex compounds, ligands or co-ordinating groups, coordination number, coordination sphere, chelate complexes, application of chelates, nomenclature of coordination compounds, isomerism-structural, geometrical, optical, optical isomerism in 6-coordinate complexes, Werner's coordination theory, effective atomic number (EAN), limitation of EAN rules, valence bond theory (VBT) of structure of inorganic complex with simple examples, crystal field theory (CFT), application of crystal field theory color of transition metal complexes.

Chemical Bond: Introduction, octet rule or rule of eight, ionic or electrovalent bond, covalent bond dipole moment, polarization of ions, Fajan's rule, co-ordinate bond, metallic bond, hydrogen bond, Van der Waal's forces.

Inorganic Salts used for Tannings: Chromium salts, its behavior in solution, oxidation rate, complex form of trivalent Ti.

LPE-107: ORGANIC CHEMISTRY

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Characteristic reactions and reaction mechanism of organic compounds: Types of organic reactions, fundamentals of organic reaction mechanism (Fission of bond, carbonium ion, carbanion), factors affecting organic reaction, attacking reagents and its role (electrophile and nucleophile), broad concept of the mechanism of substitution, elimination and addition reactions, reaction kinetics, energy requirements of organic reaction, mechanism of different reactions, nucleophilic substitution: SN^1 and SN^2 reactions, electrophilic substitution reaction, free radical substitution reaction, addition reaction:- nucleophilic, electrophilic and free radical addition reaction, elimination reaction:- E_1 and E_2 reactions.

Isomerism: Classification of isomerism, classification of stereoisomerisms, optical isomerism:- plane polarized light, specific rotations, isomerism of substance containing one and two asymmetric carbon atoms, D.L. and R.S. configuration. Geometric isomerism- condition for geometric isomerism, determination of configuration of cis-trans isomerism.

Functional groups: Different functional groups of organic compounds, reactivity of functional groups, activation and de-activation of functional groups, positioning of functional groups and its importance on chemical and physical nature of organic compounds.

Monocyclic aromatic hydrocarbon: Benzene, structure of benzene, Kekule structure, nomenclature, stability of benzene ring, resonance energy, delocalization, aromaticity-conditions and theories, substitution of benzene ring, mechanism of aromatic substitution.

A. A thorough study of the following benzene derivatives: Structure, preparation, reactivity and uses of -

- i) Halogen compounds- fluoro and chloro- chemicals.
- ii) Hydroxy compounds- phenol, β -naphthol, cresol, anthrasol.
- iii) Nitro compounds-nitro benzene and its derivatives.

B. A through study of the following class of compounds-

- i) Aldehydes and Ketones (Formaldehyde, acetaldehyde, glutaraldehyde, acetone).
- ii) Aliphatic mono and di-carboxylic acids (Formic acid, acetic acid, acrylic acid, oxalic acid and succinic acid) and their important derivatives (Amide, ester, etc.).

Atmospheric Pollutants: Organic solvent vapours, isocyanate vapours, rubber fume.

Renewable Resources and green footwear: Upper and lining materials, sole units, insole boards, sewing threads and adhesives, packaging.

Safety audit checking: walking or working areas, storage lofts, second floor, etc, stairs and ladders, egress, occupational health and environmental control. Occupational noise exposure, hazardous materials, general environmental controls.

Management of emergency situations: basic first aid, spillage of chemicals, fires, machinery safety.

LPE-108: CHEMISTRY PRACTICAL

Class per week	Credit	Marks
2	4	Continuous assessment : 40, Course final examination 60

Inorganic:

1. Qualitative analysis of inorganic mixtures containing not less than four radicals including the interfering and insoluble radicals by classical or semi-micro methods; Preliminary and Confirmation tests for the following ions: -

- a) Anions: Chloride, bromide, iodide, sulphide, sulphite, sulphate, carbonate, nitrate, nitrite, formates, oxalates, acetates.
- b) Cations: Lead, copper, zinc, cobalt, calcium, sodium, barium, magnesium, nickel, aluminium, chromium, manganese, iron, tin, arsenic, bismuth, potassium, ammonium, silver, mercury, cadmium, zirconium, titanium.

2. Volumetric analysis:

(A) Acidimetry-Alkalimetry:

- i) Preparation of standard solutions of sodium thio-sulphate, sodium carbonate, oxalic acid.
- ii) Standardization of hydrochloric acid with standard sodium carbonate solution
- iii) Determination of degree of alkalinity.

(B) Oxidation -Reduction Titration:

- i) Preparation and standardization of KMnO_4 using standard $(\text{COOH})_2$ or sodium oxalate.
- ii) Determination of ferrous (II) ion using $\text{K}_2\text{Cr}_2\text{O}_7$ solution as primary standard

titrant.

- (C) Iodometric Titration:
i) Standardizing sodium thiosulphate solution using dichromate solution.

3.Organic Practical:

Qualitative analysis: Identification of organic compounds containing one functional group out of the following compounds: ethyl alcohol, isopropyl alcohol, phenol, acetone, acetaldehyde, formaldehyde, formic acid, acetic acid, oxalic acid, benzoic acid, aniline and nitrobenzene.

Analysis should include the following:

- i) Physical examination
- ii) Melting point and boiling point
- iii) Detection of sulphur, nitrogen and halogen in an organic compound
- iv) Solubility in the following solvents only-
 - a) Water
 - b) 5% solution on $\text{NaHCO}_3/\text{NaOH}$ and HCl acid
 - c) Conc. H_2SO_4
 - d) Acetone
 - e) Isopropyl alcohol
 - f) Detection of different functional groups: $-\text{OH}$, $>\text{C}=\text{O}$, $-\text{CHO}$, $-\text{NH}_2$, $-\text{NO}_2$, $-\text{COOH}$.
- v) Detection of different functional groups: $-\text{OH}$, $>\text{C}=\text{O}$, $-\text{C}=\text{O}$, $-\text{CHO}$, $-\text{NH}_2$, $-\text{COOH}$

4. Inorganic crystal Preparation Practical:

- a) Inorganic Preparation: Alum, ferrous ammonium sulfate, potassium carbonate, basic chromium sulphate, potassium permanganate, chrome yellow.

LPE-109: PHYSICS

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Elasticity: Rigid body, perfectly elastic body, plastic body, stress and strain, elastic limit and elastic fatigue, Hooke's law and different elastic constants-moduli of elasticity, poisson's ratio, determination of elastic constants factors affecting elasticity.

Surface Tension: Surface energy and surface tension, excess of pressure inside a spherical liquid drop, capillarity.

Optics: Light and light sources, electromagnetic spectrum, prism and dispersion of light, power of a lens, defects of images, spherical aberration, astigmatism, coma, curvature and distortion., chromatic aberration, optical instruments: compound microscope, polarizing microscope, camera and photographic techniques, spectrophotometer, Interference of light, Fresnel's bi-prism, Newton's rings, diffraction of light: Fresnel and Fraunhofer diffraction, diffraction gratings, resolving power of a grating, polarization, polarized and unpolarized light, polarization by reflection and refraction, Brewster's law, double refraction, nicol prism, polarization by scattering, scattering of light, optical rotation, polarimeter.

Transmission of heat: Conduction, convection and radiation, thermal conductivity of solids and liquids, coefficient of thermal conductivity, good and bad conductor of heat, determination of thermal conductivities of bad conductors- Lee's method.

Radiation: Electromagnetic theory of radiation, black body radiation, emissive power and absorptive power, Kirchoff's law of radiation and its experimental verification, displacement law, Stefan Boltzmann law, quantum theory of radiation, Plank's law, Raleigh-Jeans's law, Planck's radiation pyrometers, temperature of the sun, solar constant.

Static electricity: Electric charge, Coulomb's law, electric field- calculation of the electric field strength due to a point charge, intensity of electric fields, electric dipole, electric flux and Gauss's law, potential and field strength, equipotential surface, potential due to a point charge, capacitor and dielectrics, combination of capacitors in series and parallel, dielectrics and Gauss's law, three electric vectors, energy storage in an electric field.

Current electricity: Electromotive force, electric current and current density, electric circuits, resistance, resistivity and conductivity, Ohm's law, energy transfer in an electric circuit- Joules law. Combination of resistances, Kirchoff's laws, Wheatstone bridge, varying current, growth and decay of currents in LR, CR and LCR circuits, magnetic field due to a current, Ampere's law, magnetic induction for a solenoid, magnetic induction near a long wire, Ampere's circuital law, electromagnetic induction- Faraday's laws, Lenz's law, Leus's law and the law of conservation of energy, Fleming's right hand rule, eddy current, self and mutual induction, unit of inductance. Alternating currents- concept of r.m.s. and average values of alternating current and voltage, A-C circuits containing LR, CR and LCR in series, calculation of expression for current and power, power factor, resonance.

Modern physics: The atomic structures, atom models, orbital energy, radioactivity, laws of radioactive disintegration, half life and mean life, laws of successive disintegration, alpha, beta, gamma and X-ray and their applications, photoelectric effect, Compton effect, Plank's radiation formula, Einstein's photon theory.

LPE-110: PHYSICS PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

1. Determination of the radius of curvature of a lens by Newton's ring method (wavelength of light to be given).
2. Determination of the refractive index of a material of a given prism by a spectrometer.
3. Determination of the grating constant of a plane diffraction grating.
4. Determination of the specific sugar solution (at six different concentrations) with the help of a polarimeter.
5. Determination of the value of M and H by magnetometer.
6. Verification of the laws of combination resistance by P.O. Box (at least three different resistance, are to be used).
7. Determination of the resistance of a galvanometer by half deflection method.
8. Determination of the figure of merit (current sensitivity) of a galvanometer.
9. Measurement of low resistance by ammeter and voltmeter.
10. Verification of Ohm's law.
11. Determination of the value of low resistance by the method of fall of potential.
12. Determination of the electrochemical equivalent (ECE) of copper-by copper voltameter.
13. Determination of the J (mechanical equivalent of heat) by electrical method.
14. Determination of the temperature coefficient of resistance of a coil.
15. Graphical representation of the variation of the elongation of the given wire with load and determination of the Young's modulus of the material of the wire by Searle's apparatus.
16. Determination of the modulus of rigidity of a cylindrical wire by dynamic method.
17. Determination of the value of "g" by Kater's reversible pendulum.
18. Determination of the thermal conductivity of rubber.
19. Determination of the thermal conductivity of bad conductor by Lee's method.
20. Determination of the specific heat of a liquid by the method of cooling.
21. Determination of the velocity of sound at N.T.P by resonance column.
22. Determination of the frequency of a tuning fork by Meld's experiment (use either transverse or longitudinal arrangement).

LPE-112: ENGINEERING DRAWING

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

Introduction, Drawing equipment and the use of instruments; Basic drafting techniques and standards; Geometrical curves including plane curves; Cycloid, Hypocycloid, and the Involute. Intersections at various positions of geometrical bodies such as prisms, pyramids, cylinders and cones. Development of surfaces of prisms. Pyramids, cylinders, cones, drum, gear-box guard, knife-guard, coating machine, hand spray, spray coater, roller coater, etc. Freehand sketching of machine and engine components; Locking arrangements; Foundation bolts; Stuffing box; Shaft couplings; Foot-step bearing; Pulleys; Engine connecting rod. Concept of working drawing of component parts of machines and engines; Size, description, dimensions, and specifications; limit dimensioning and geometric tolerance; limits; Fits and tolerances, conventional symbols. Sectioning of machine and engine components; Orthographic projections and standard practices Isometric views with particular reference to piping and ducting. Layout drawing of a modern tannery.

LPE-113: COMPUTER AND INFORMATION ENGINEERING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction to computer: History and development of computer, types of computers, Scope of computer, impact of computers on society and technology, working principle of a computer system, single and multi-user systems.

Hardware: Organization and architecture, motherboards & microprocessors, memory units: primary memory, secondary memory, Input/Output device, other peripheral devices like pointing devices, display devices, printing devices etc

System software: Operating system concepts, importance, components and basic functions of DOS, Windows and LINUX operating systems.

Application software: Desktop publishing: Desktop publishing includes effective page layout techniques, ways to add graphics, manipulating text and print. Word processing: Word processing

software includes creating documents, printing documents, changing the appearance of text or lines of text, changing page formats and other writing tools. Spreadsheets: Spreadsheets software includes basic concepts of spreadsheets, making basic worksheets entries, entering formulas to perform calculations, altering column options, working with ranges versus all of the worksheets, basic print options, file commands and basic graphing. Database: Database management system, database concepts, creating a database file structure, entering and editing data, displaying, organizing and printing data, modifying the data structure, creating queries and building and printing custom reports or forms.

Maintenance: Power supply stability, grounding, effects of surge, sag current and its protection, classification of stabilizer and UPS, effect of static charge on computer devices, handling of computers cards and chips, computer viruses and protections, operating system setting, disk-partitioning, software troubleshooting and maintenance.

Computer networks: Concepts of network, different types of network, study of LAN concepts and operation, hardware and software for networks, data transmission, network architectures, protocols and standards are examined, as well as install and uninstall network components and peripheral devices, study of connectivity between LAN and wide area networks.

Internet: Worldwide web including navigating the internet, task-oriented skill sessions on logging on, Internet services: Telnet, FTP, e-mail, www, internet, Intranet etc.

Mobile and wireless Communication: 1G, 2G, 2.5G and 3G mobile, GSM and CDMA, bluetooth, WiFi Max etc.

LPE-114: COMPUTER AND INFORMATION ENGINEERING PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

Operating system: Students will learn how to operate a computer in two basic environments- dos and windows and to install DOS, windows operating system. Word processor: students will learn to use a popular word processor to create a camera-ready test file complete with figures, columns and tables. Spread sheet: students will learn how to use a popular spread sheet to maintain a minor book keeping, statistical and graphical analysis off data. Database: students will learn how to design a database structure/table. Computers assemble: students will assemble a computer. Internet: e-mail access, browsing, downloading.

LPE-115: MATHEMATICS-I

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Algebra: Determinant, matrix, inequalities.

Vector algebra and vector calculus: Introduction, scalar and vector products, solutions of vector equations, applications of vectors in geometry, vector calculus: vector function of scalar variables, differentiation of vector functions: grad, div and curl of functions, line, surface and volume integrals: green, gauss and stokes theorems-verification and applications.

Differential calculus: Functions of real variable and their graphs, limit, continuity and derivative, physical meaning of derivative of a function, evaluation of indeterminate forms of limit, L' Hospital's theorem, higher derivatives, Leibnitz theorem, Role's theorem, mean value theorem, Taylor's theorem, Taylor's and Maclaurin's series, maximum and minimum values of functions, functions of two and three variables, partial and total derivatives, Euler's theorem, concavity and convexity of a function.

Integral calculus: Definition of integration, integration by the method of substitution, integration by parts, standard integrals, method of successive reduction, definite integral, its properties and use in summing series, Walli's formulae, improper integral, beta function and gamma function, area under a plane curve in Cartesian and polar coordinates, area of the region enclosed by two curves in Cartesian and polar coordinates, Trapezoidal rule, Simpson's rule, area, lengths of curves in Cartesian and polar coordinates, parametric and pedal equation, intrinsic equation, volumes of solids of revolution, volume of hollow solids of revolution by shell method, area of surface of revolution.

LPE-117: BUSINESS AND COMMUNICATIVE ENGLISH FOR ENGINEERS

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction to English grammar and its usage: Basic English Grammar and its standard usage.

English language: Its function as a primary means of communication to the technologists in writing, speaking, listening and reading.

Writing: Planning – technique, style and form, paragraph headings context, vocabularies writing for specific purposes.

Technical writing: Technical and industrial report including various types of technical reports with emphasis on preparation, data collection and research, organization style format graphics technical descriptions and report writing. Proposal for new equipment increasing production, description of visits

Business / commercial Writing: Job application, Business Letters

Speaking and Listening: Effective communication between speaker and listener through presentation. Use of visual aids.

Reading and Understanding: Technical and scientific books and journals.

Style Of Letters: Full blocked, Semi-blocked, Blocked

Parts Of Writing Official Letters: Techniques of writing (Heading, Reference, date, inside address, topic, greetings, complementary closing, Signature, Supplements.

Types Of Format Documentation (In English)

Application with Curriculum Vitae (C.V)

Appointment letter

Joining Report

Letter of enquiry, orders, cancellation

Letter of compensation and complaint

Letter to the print and Electronic media

Application for opening a Bank Account

Application for Bank Solvency Certificate

Application for Bank Loan

Office note

Memorandum

Notice Writing

Listening: Phonetics and phonology, Sound practice.

**UNIVERSITY OF DHAKA
BANGLADESH**

**DETAILED GUIDE LINES AND SYLLABUS
FOR
B. Sc. IN LEATHER-PRODUCTS ENGINEERING
(FOUR YEARS COURSE)**

SECOND YEAR

Approved by Academic Council
University of Dhaka

**Institute of Leather Engineering and Technology
University of Dhaka, Hazaribagh, Dhaka-1209.**

**RULES AND REGULATIONS APPLICABLE FOR
INSTITUTE OF LEATHER ENGINEERING AND TECHNOLOGY
DEPARTMENT : LEATHER PRODUCTS ENGINEERING**

B. ACADEMIC RULES

1. The Institute of Leather Engineering and Technology (ILET), Hazaribagh, Dhaka shall be deemed to be an institute of the University of Dhaka.
2. The degree to be awarded by the University of Dhaka shall be designated as B. Sc. in Leather Products Engineering.
6. The Courses for the B. Sc. in Leather Products Engineering shall extend over four academic years.
7. The medium of instruction and examination shall be in English.
8. Every year there will be an admission test for new intakes. The rules and regulations and other necessary works for the admission purpose will be performed by the central admission committee of the University.
17. Candidates for admission to the first year B. Sc. in Leather Products Engineering shall be required to have passed the Higher Secondary Certificate in Science with Physics, Chemistry and Mathematics or its equivalent from a recognized Board or Institution. Foreign students with requisite qualification may be admitted with the approval of the University of Dhaka.
18. Admission to the first year B. Sc. in Leather Products Engineering programme shall be based on the results of S.S.C. and H.S.C. or its equivalent examinations and the admission test to be conducted based on current rules by the Central Admission Committee.
19. The detail syllabus for degree of Leather Products Engineering shall be approved by Academic Council of the University of Dhaka.
20. An Examination Committee for each year consisting of 4 (four) members of which 3 (three) shall be internal and 1 (one) from other departments of the Institute or the university or research organization shall be constituted by the departmental academic committee. Any full time teacher of the concerned department of the institute shall be the chairman of the Examination Committee.
21. There shall be a Departmental Academic Committee consisting of all the full-time teaching staff to help academic matters.

22. Every year before the commencement of Academic session the list of part time teachers (if required) shall be prepared course wise and must be approved by the dean of the concern Faculty of Dhaka University. Dean will have the right to modify the list with the consultation with the concern head of the department and the Director of the institute.
23. The question paper setters and the examiners will be selected by the Examination Committee from a panel approved by the University.
24. The question papers shall be moderated by the Examination Committee.
25. No candidate shall be eligible for degree of B. Sc. in Leather Products Engineering unless he or she has undergone the approved courses of study for a minimum period of four academic years and maximum of six academic years.
26. There shall be 15, 1-class hour lectures for 1 credit of theory classes. There shall be 30 hour lectures for 1 credit of Practical classes. Each of the class duration is 50 minutes.
27. No student shall be allowed to study any other degree programme during his/her study in Institute of Leather Engineering and Technology.

B. CURRICULUM AND EXAMINATION RULES

17. The subjects to be studied and the scheme of examinations for B. Sc. in Leather Products Engineering courses are given in Annexure-A.
18. There shall be a final examination at the end of each academic year to be conducted by the University of Dhaka.
19. Two examiners, of whom one will be the course teacher and the others, shall be from other departments of the Institute or University or research organization. The average of two will be taken as final. In case of the difference of more than 20% marks between the two examiners, the script/scripts will be evaluated by a third examiner appointed by the Examination Committee from the approved panel and the average of nearest two marks will be taken as final. In the case of equal difference between the marks of three examiners the middle marks will be taken as final.

21. Final practical examinations will be conducted jointly by Four examiners, 3 (three) internal and 1 (one) external appointed by the examination committee.

22. Grades and grade points will be awarded on the basis of marks obtained in the written, oral or practical examinations and/or laboratory performance according to the following scheme:

Marks Obtained (%)	Grade	Grade Point
80-100	A ⁺	4.0
75-79	A	3.75
70-74	A ⁻	3.50
65-69	B ⁺	3.25
60-64	B	3.00
55-59	B ⁻	2.75
50-54	C ⁺	2.50
45-49	C	2.25
40-44	D	2.00
Marks Obtained (%)	Grade	Grade Point
<40	F	0.00
	I	Incomplete
	W	Withdrawn

A student obtaining 'D' or higher grade will be counted as credits earned by him/her. A student obtaining 'F' grade will not be counted towards his earned credits.

The GPA (grade point average) will be calculated according to the following formula:

$$\text{GPA} = \frac{\sum (\text{Grade points in a course} \times \text{Credits for the course})}{\text{Total credits taken}}$$

CGPA = Cumulative GPA for different years.

22. The total performance of a student in a given course is based on continuous assessment and course final examinations.

- (i) For theory courses the assessment is made through in-course assessment, and final examinations;
- (ii) The assessment of laboratory and / or field courses will be made through observation of the student at work, viva-voce, assignments and evaluation of practical reports.

An examination committee for each year shall be constituted at the beginning of the session.

The distribution of marks for a course will be as follows:

(a) Theory courses:

In-course assessment: 30% of total marks shall be taken as in-course assessment. 5% marks will be awarded on the basis of attendance as follows:

90% and above	5%
85% to less than 90%	4%
80% to less than 85%	3%
75% to less than 80%	2%
60% to less than 75%	1%
Less than 60%	0 (Zero)
(ii) Course final examination	70% of total marks
(iii) Continuous assessment	40% of total marks for practical courses
(iv) Practical Final Examination	60% of total marks

(b) In-course assessment for theory courses: In-course assessment will be done by taking class tests.

- (i) Maximum duration of in-course tests will be one class hour.
- (ii) Questions for in-course tests may preferably be of multiple choice (MCQ) type. Students may also be evaluated using short questions as decided by the course teacher.
- (iii) At least one test for 2 credits hour courses and two tests for 3 or 4 credit hour courses will be taken.

- (iv) Course teachers must announce results within 4 weeks of holding the examination.
 - (v) The course teacher will show the assessed in-course scripts to the students.
 - (vi) Marks for in-course assessment must be submitted by the course teacher to the Chairman of the Examination Committee and Controller of Examinations before holding the final examination.
- (c) Continuous assessment for Practical courses: Continuous assessment will be done on the basis of class performance, report writing and class attendance.

(d) Year-final examination (Theory & Practical courses):

- (i) Student having attendance 75% or more (Collegiate) are eligible to appear in the final examination.
- (ii) Students having attendance 60-74% are eligible for sitting in the final examination on payment of fees as decided by the University.
- (iii) Student having attendance less than 60% are not allowed to sit in the final examination.
- (iv) The year final examination will be conducted centrally by Controller of examinations as existing system.

(v) The duration of theoretical examinations will be follows:

Credit	Duration of theory examinations
4 credit theory course	4 hours
3 credit theory course	3 hours
2 credit theory course	2.5 hours

- (vi) Duration of practical examinations will be from 4-6 hours irrespective of credit hours.
- (vii) For final examinations, there will be two examiners: first examiner will be one of the course teachers and the second examiner will be other departments of the Institute or University or Research organization. Evaluation will be made under the existing rule.

(viii) Marks for final examination will be evaluated by broad and short answer questions.

Practice of giving options should be avoided as far as possible.

23. A student has to take the required courses for a particular year, appear at the annual examination and score a minimum specified GPA/CGPA to be promoted to the next year.

Promotion to the next year will be given if a student scores minimum GPA/CGPA as follows:

1st year to 2nd year: GPA 2.00 (D)

2nd year to 3rd year: CGPA 2.25 (C)

3rd year to 4th year: CGPA 2.25 (C)

24. The requirements for the award of the Bachelor of Engineering degree are as follows of the Department:

(i) Completion of the courses for the minimum required credits in a maximum period of six academic years;

(ii) Appearing at the final examination in all the required courses;

(iii) Scoring a CGPA of 2.5, after considering the grades of improvement Examinations.

25. A student must complete his/her studies for a Bachelor's Degree within a maximum period of six academic years.

26. Improvement/retake will be followed by:

(i) If students obtain a grade C+ or lower in a course in any year, he/she will be allowed to repeat the term-final examination only once with the following batch for the purpose of grade improvement, but he/she will not be eligible to get a grade better than 'B+' in such a course. A student failing to improve his/her grade in a course can retain the earlier grade.

(ii) Grade improvement will not be allowed in those courses in which a student obtains grade better than 'C+'.

(iii) A student will be allowed to repeat a maximum of 20 credits in four years B.Sc. Program for grade improvement purpose.

(iv) Improvement Examination will be taken only for term-final test. No improvement examination will be taken for in-course, practical course, field work, assignment and oral presentation.

27. (i) A course in which a student has obtained 'D' or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained 'F' grade will not be counted towards his earned credits.

- (ii) A student who obtains 'F' grade in a course will be allowed to improve the grade two times with any following batches with a condition that he/she has to complete the Bachelor of Engineering Program within period of 6(six) academic years from the date of first admission.
- (iii) 'F' grade will not be counted for GPA calculation. But will stay permanently on grade sheet and Transcript. When a student will repeat a course in which he/she previously obtained 'F' grade, he/she will not be eligible to get grade better than 'B+' (grade point 3.25) in such a course.

28. Readmission will be followed by:

- (i) A student may seek re-admission provided he/she has at least 30% attendance in the present year and may continue studies as a regular student.
- (ii) On re-admission grade earned earlier by a student in the class of re-admission shall in general cease to exist and the student has to retake all courses and examination but in case if they do not get the opportunity to repeat the courses due to late admission, marks of in-course assessment and laboratory performance assessment in the previous year may be retained by the students.

29. Drop out will be followed by:

A student failing to earn the yearly GPA for promotion from one year to next year after taking improvement / readmission in any year shall be dropped out of the program.

30. Dean's Award will be followed by:

As a recognition of excellent performance, the names of students obtaining an average CGPA of 3.75 or above in an academic year without appearing any improvement examination may be Published in the list of Dean's award of the Faculty.

31. The failed candidates may seek readmission into the concerned classes on payment of usual fees except university registration fee or may appear in the concerned examination irregular candidates provided they have passed in all practical subjects on payment of examination and center fees as fixed by the University. The marks obtained by the irregular candidates in the practical examinations; in-course assessment and the project work (if applicable) in the earlier session shall be counted in deciding the results of their examinations.

32. The University may from time to time revise, amend or change rules and regulations and scheme of examinations and syllabus. In the case of students already undergoing the course, the changes will take

effect from the beginning of the following academic year after the changes are introduced and shall cover the part of the courses that remain to be completed.

33. In the case of any dispute in interpretation of the rules and regulations regarding the degree programme of B.Sc. in Leather Products Engineering, the decision of Academic Council of the University of Dhaka shall be final.

INSTITUTE OF LEATHER ENGINEERING AND TECHNOLOGY

DEPARTMENT: LEATHER-PRODUCTS ENGINEERING

LPE-201: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS- II

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Finished Leather, Composition of finish film, Classification of finished leather, Theory of film formation. Finishing defects. Edge coloring, Edge dyeing machines, Manual dyeing machine, Semiautomatic-automatic dyeing machines, Dyeing machine for perforations.

Machine Cutting: Introduction, Arm type clicking press, parts and their function of arm type clicking machine, procedure, process control, acceptance criteria, Trouble shooting, of arm type clicking press, Traveling head press, Beam press, Technology modules on automatic die cutters, advantage of automatic die cutting system, specification and architecture of cutting systems.

Preparation phase: Introduction, Preparation operations, Applying eyelets, rivets, studs and similar details, preparing belt loops, Splitting for equalizing the leather, performances and levels of automation for splitting. Skiving process. Edge folding, First level edge folding machine, Second level edge folding machine, Third level edge folding machine, performances levels of automation of edge folding.

Embossed printing: Introduction, Printing and cutting of small component part. Printing perforating watchstraps. Process control, procedure and acceptance criteria of embossing.

Attaching: Introduction, Applying cement adhesives, Process control, procedure and acceptance criteria of embossing.

Sewing machines: Types of sewing machine and their properties, Parts of sewing machine and their functions. feeding system. Feeding mechanism. Theory of stitch formation.

Needle: Definition, Parts of needle and their functions, Needle identification---needle size, needle point, needle system; Selection of sewing needle.

Thread: Introduction, Thread twist—‘Z’ and ‘S’ twist, Properties of thread, Thread sizing, Thread and needle relationship.

Joining techniques: Definition of stitch, seam, sewing; types of stitch and their properties.

Types of seam **a)** Constructional seam---- Plain / open seam, closed seam, taped seam, top-stitched seam, flat- felled seam, chanel / slot seam, flat / zipper / zig-zag / butted seam, French / silked seam, Brooklyn seam, welted seam, piped seam.

b) Decorative seam-----Lacing / Thonging, cable stitching, glove stitching, moccasin stitch.

Money bag : Introduction, types & use, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

Lunch bag : Introduction, types & use, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

Photo Frame : Introduction, types & use, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

File folder : Introduction, types & use, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

LPE-202: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS- II PRACTICAL

Class per week	Credit	Marks
2	4	Continuous assessment : 40, Course final examination 60

Introduction of tools and their uses and tooling techniques:

Leather decoration techniques: Stamping, engraving, batik, screen-printing, molded work, embroidery, carving, beveling shading, appliqué, perforating.

Joining techniques: Hand stitching, thong or lacing technique, button or rivet attaching.

Pattern cutting: Introduction of pattern cutting technique, consideration of allowance, lining construction, working pattern making.

Manufacturing of the following Leather-Products:

- a) Coin Purse
- b) Key Case
- c) Card Holder
- d) Wallet
- e) Photo frame
- f) File folder
- g) Lunch bag
- h) Waist belt

LPE-203: APPLIED CHEMISTRY AND CHEMICAL ENGINEERING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Oils, Fats and waxes:

Oils and its classification, animal fats, characteristics and uses of fatty oils and fats, waxes and its classification, saponification value, acid value, iodine value of oils, fats and waxes, extraction and refining method of vegetable oils, rancidity of oils, hydrogenation of vegetable oils.

Soaps and Detergents:

Cleansing mechanism of soap, raw materials of soap manufacturing, Batch-kettle process and modern process of soap manufacture, detergent and its classification, manufacture of ABS detergent, glycerine and its manufacture.

Glue, Gelatin and Adhesives:

Introduction, characteristics and uses of glue and gelatin, adhesives and its uses, gelatin manufacture and by products, animal glue.

Cosmetics:

Introduction, types of cosmetics, hair products (shampoo, hair straightener), face powder, cleansing cream and lotion, lipstick, eye makeup, preshave, shaving & aftershave preparation.

Material balance:

Fundamental of material balance: Types of balances, steady state and unsteady state operations, principle and procedure of material balance, material balance calculations of problems without chemical reactions.

Material balance on reactive system: Stoichiometry, stoichiometric equation, stoichiometric coefficient, stoichiometric ratio, stoichiometric proportion, limiting and excess reactant, recycle, purge and by-pass, mass balance involving chemical reactions.

Energy balance:

Principles of energy conversion and conservation, form of energy, total energy balance, heat of reaction, heat of combustion, heat of formation, theoretical and excess air of combustion, energy balance calculation without and with chemical processes.

Absorption:

Principle of absorption, operational and constructional features of packed absorption tower, mass balance equation of packed absorption tower, tower packings and their characteristics.

Refrigeration:

Introduction, vapor-compression refrigeration cycle, absorption refrigeration cycle, refrigerants, refrigerants classification, refrigerants properties and uses.

Fluid mechanics:

Introduction, fluid flow and its measurement, laminar flow, turbulent flow, Reynold's number, Euler's differential equation of hydrostatic pressure, basic equation of hydrostatic equilibrium and its application, fluid machinery- pumps.

LPE-204: APPLIED CHEMISTRY AND CHEMICAL ENGINEERING PRACTICAL

Class per week	Credit	Marks
2	4	Continuous assessment : 40, Course final examination 60

Lab I:

Analysis of Industrial Raw materials:

1. Water
2. Sulphur
3. Oil seeds
4. Cellulose raw materials
5. Raw hides and skins
6. Different types of Leather
7. Effluent of raw hides and skins
8. Sea salt
9. Chrome powder

Lab II:

Analysis of Industrial Products:

1. Soap
2. Acids and alkaline
3. Fish oils
4. Hydrogenated fats
5. Animal fats and oils
6. Wet-blue hides and skins
7. Crust Leather
8. Different type of finished Leather

Lab III:

Instrumental analysis

1. study of kinetics of chemical reactions using:
 - a) Polarimeter
 - b) Conductance bridge
 - c) Spectrophotometer
 - d) Chemical analysis
2. Electrochemical measurements: P^H measurements
3. Spectrophotometric analysis
4. Chromatographic analysis

LPE-205: MATERIALS SCIENCE AND TECHNOLOGY

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Polymeric Materials used for leather-products manufacture: Introduction, properties and applications of polymeric materials-- PVC, ABS, PS, PU, PP, EVA, PE, Nylon, Acrylics, fibre reinforced plastics type of materials and their quality, materials for quality assurance.

Modifications of polymeric materials for different Leather Products components: Polymer blending, high polymer blends, plasticization, other additives, fillers, antioxidants, flame-retardants, stabilizers, colorants and pigments, post reactions of polymers.

Moulding techniques and equipment: Moulding techniques and equipment used in fabrication of polymer products such as injection moulding, calendaring, reaction injection moulding (RIM), DVP, blow moulding etc.

Outer materials:

Leather: Calf leather, side leather, full grain leather, corrected grain leather, patent leather, printed side leather, suede leather, split leather, nubuck leather

Coated Fabrics: Coated fabrics: Introduction, types of coated fabrics, backers and coating materials used in coated fabrics, direct coating and transfer coating, poromerics, PVC coated fabrics, PU coated fabrics, rubber coated fabrics and their properties & application in leather products industry, comparison between leather and synthetics, Manufacturing techniques of different types of coated fabrics, advantages and disadvantages of coated fabrics compared to leather.

Lining Materials: Drill Cloth, Sugar Coated Fabrics & other synthetic lining materials, Different lining Leather.

Adhesives: Introduction on adhesive formulations, different adhesive formulations, mechanism of adhesion, kinetics of adhesives, thermal, chemical, mechanical, electrical, rheological characteristics of adhesives. Factors affecting of adhesion, surface preparation for optimum adhesion, Methods of application of adhesives, Curing of hot melt adhesives, curing of liquid adhesives, Function of primer and hardener in adhesion, Links of adhesion and their bonding, faults, their cause and remedy of adhesion.

Sole, insole and heel Materials: Raw materials, kinds of sole, ideal qualities for sole, PVC, PU, TPR, Micro cellular rubber, crepe sole, leather sole, EVA, polystyrene, nylon, polyethylene, insoles- raw materials, kind of insoles, ideal qualities for insoles, heels: definition, different materials for heels, Wood heels, plastic heels, ABS, EPDM, injection moulded heels- mould design, raw materials selection- injection moulding and finishing, welts, runners for different types of shoes.

Other Materials for Leather Products and Footwear: Last, Shank, Toe puffs& Stiffener, Reinforcement Materials, Thread, Needle, Zipper, Eyelet, Buckles, Bottom filler, leather board.

Leather Products dressing materials: Introduction, objectives of products dressing, finish identification of leather, selection of dressing system and materials, Different products & shoe dressing materials; cleaner, waxes-abrasives wax, repairing wax, burnishing wax, polishing wax, fillers, renovators, etc.

Polishes: Raw materials for the wax foundation-Definition and classification of wax substance, vegetable waxes, animal waxes, other animal waxes, hydrogen waxes, montan wax and similar waxes, synthetic waxes of different structure. Fats, fatty acids and resin used for the wax foundation of emulsified polishes, wax-like fats, non wax-like raw materials.

Water- free polishes: Water- free polishes-The wax foundation, Gloss and binding value, Correct blending of waxes, choice of solvent, Replacement of turpentine, The actual manufacturing procedure, The melting process, Adding the solvent, Measuring the solvent, The thinning operation, special

prosecutions, The filling operation, Essential points to observe, Some faults which should be avoided, Some recipes.

Water-containing chemicals: The water-containing finishing creams and some recipes, White polishes.

LPE-207: MATHEMATICS-II

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Two-dimensional geometry: Change of axes, pair of straight lines, general equation of second degree, circle, system of circle, parabola, hyperbola.

Three dimensional geometry: Plane and lines - co-ordinates, direction ratios and cosines of a line, equations of a line and a plane, intersecting planes, symmetric form of a straight line, angle between lines and planes, coplanar lines, skew lines, shortest distance, curved surfaces, equations of a sphere, section by a plane, tangent plane, standard equations of cone, cylinder and conchoids properties.

Trigonometry: Complex numbers and functions: De Moivres theorem and application, summation of finite trigonometric series, hyperbolic function.

Laplace transforms: Transforms of simple functions, basic operational properties, transforms of derivatives and integrals, periodic functions, convolution theorem, inverse transforms, initial and final value theorem, applications of Laplace transforms to linear differential equations.

Fourier series : Dirichlet's conditions, general Fourier series, half range sine and cosine series, Parseval's identity, harmonic analysis.

Fourier transforms: Fourier integral representation, Fourier transform pairs, properties, Fourier sine and cosine transforms, transforms of simple functions, transform of derivatives, the convolution integrals of Fourier, application to one dimensional wave and diffusion equation.

Differential equation: Ordinary differential equation: formation of differential equation, solution of first order differential equation by various methods, solutions of general linear equations of second and higher order with constant coefficients, solutions of homogeneous linear equation.

Partial differential equations: Formation, solution of standard types of first order equation and Lagrange's equation, classification of second order partial differential equations, linear partial differential equations of second order and higher order with constant coefficients.

LPE-209: STATISTICS

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Historical development of the subject, its nature and scope, nature of statistical data, attributes and variables, population and sample, collection and condensation of data. Frequency distribution, graphical representation of data.

Measures of location: Arithmetic mean, median and mode, geometric mean, harmonic mean. quadratic mean, deciles and percentiles.

Measures of dispersion: Range, mean deviation, standard deviation, variance, quartile deviation. Coefficient of variation, moments and cumulates of a distribution, skewness and kurtosis.

Regression and correlation: Bivariate data, relationship between the varieties, method of least squares, regression line, correlation and regression coefficients, rank correlation.

Probability: Definition of probability and related concepts, laws of probability, discrete and continuous random variables, mathematical expectation, conditional probability, Binomials, poisson and normal distribution and their properties.

Sampling: Population and sample, census and sampling, methods of sampling, random sampling, stratified sampling, systematic sampling, two stage sampling errors and non sampling errors, population projection.

Statistics for industry: Introduction, level of significance, hypothesis, important steps in a test of significance, testing the difference between two-sample mean and population mean. Acceptance sampling procedure, introduction, acceptance sampling by attributes, consumer's and producer's acceptance sampling by variables, continuous sampling plan, sequential sampling. Control charts natural tolerance limits and specification limit.

Index number: The concept of an index number, problems in construction of index number. Construction of price, quantity, value and cost of living indices, their uses. Laspeyere, paasche and Fisher's ideal indices, test of index number, cost of living index number. National income & wealth.

Educational statistics: Introduction, education and psychology, scaling measurement of different scores, IQ, planning, reliability and validity of tests.

Difference equations and z-transform: Linear difference with constant coefficients, elementary properties of z transform, applications of z transform, application of z transform to difference equations.

LPE-211: MECHANICAL ENGINEERING FOR LEATHER-PRODUCTS MANUFACTURE

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Engineering materials: Introduction, properties of engineering materials, characteristics & specification of brick, composition & uses of sand, constituents of cement, cement concrete (c.c), reinforce cement concrete (r.c.c.), abrasives; types of abrasives, abrasive wheels, use of abrasives in leather-goods, normal abrasive, artificial abrasive, paints & their constituents, fuels & lubricants, types of iron & steels, reason for alloying, iron-carbon equilibrium diagram.

Corrosion: Definition of corrosion, behavior of iron and steel in atmosphere, types of corrosion atmospheric, soil, high temperatures, stray current, protection from corrosion and its types, inorganic coatings, metallic coatings, non-metallic inorganic enamel and cathodic coatings.

Engineering mechanics: Introduction, force, moments and their applications; lever, center of gravity, moment of inertia, work, power and energy, friction on inclined surfaces; wedge, simple stress and strain, pressure vessel, torsion of circular shafts.

Fluid mechanics: Introduction, fluid flow and its measurement, boundary layer equations, laminar flow, turbulent flow, compressible flow, fluid machinery; pumps, lifting machines, etc. compressors; type of compressors, pneumatic compressor; preparation of compressed air, use of compressed air in leather-products machinery, blowers, **hydraulics**; the pressurization, hydraulic clicking press operation, hydraulic devices.

Heat and mass transfer: Introduction, different modes of heat transfer, heat transfer through plane wall, composite wall and cylindrical wall, overall heat transfer co-efficient, critical thickness of insulation, solution of energy balance equations, heat exchangers.

Refrigeration and air-conditioning: Introduction, vapor-compression refrigeration cycle, refrigerants, fundamentals of air-conditioning, summer air-conditioning system.

**LPE-212: MECHANICAL ENGINEERING FOR LEATHER PRODUCTS MANUFACTURE
PRACTICAL**

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

Mechanical Machines: Introduction, hand tools & accessories, measuring tools, machine tools, uses of steel vice, working bench, lapping machine, lathe, shaper, milling, drilling and grinding machine, air compressor, knife bending machine, knife cutting machine and leather crushing machine etc.

Welding: Shop safety practice, acquaintance with arc and gas welding tools, machines, electrodes, gas cylinders and their identification, types of gas flames, safety and precaution for welding. Practice on gas, arc welding and gas cutting on ms sheets and plates, non-ferrous metal working, cast-iron welding, soldering and brazing, study of welding defects.

Machine elements and their maintenance: Introduction, power transmission system, gear, pulley and chain, bearing, wood and machine screws, simple lifting machine; efficiency of machine, steam boiler and their accessories and mountings, pre-heater, heater, super-heater and economizers, planning and scheduling of preventive maintenance, break-down maintenance and trouble shooting, computerized machine maintenance systems.

LPE-213: ELECTRICAL AND ELECTRONIC ENGINEERING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Electrical: Different types of symbol used in electrical circuits, types of wires and cables and their uses, domestic and factory wiring, Delta-wye transformation, network-analysis methods of branch and loop currents, method of node-pair voltages, Thevenin's and Norton's theorems, magnetic field, right-hand rule, magnetic flux density, Biot-savart law, magnetic properties of matter, poles and dipoles, Gauss's law for magnetism, para magnetism, diamagnetism and ferromagnetism, nuclear magnetism, magneto motive force, magnetic field intensity, permeability, susceptibility, energy in a magnetic field, magnetization curves, Hysteresis, magnetic field intensity, measurement of magnetic flux, energy of magnetic field, theory of ferromagnetism. Electrical machines: Introduction to magnetic circuit, eddy current loss, core loss, elementary A.C. generator, Transformer: single-phase transformer-equivalent circuit, laboratory testing, introduction to three-phase transformer, D.C. generator: principles, types, performances and characteristics, D.C. motor: principles, types, performances, speed control, Ward Leonard system, starters and characteristics. A.C. machines: three phase induction motor principles, equivalent circuit, introduction to synchronous machines and fractional horse power motors, choice of motor and generator for specific load, armatures and their types, winding and rewinding of armature, manual and automatic star-delta starters, Driver Servo-motors: basic theory and application. Measuring instruments and their classification, working principles and uses (Ammeter, voltmeter, wattmeter, energy meter, AVO-meter, frequency-meter, earth-tester, clamp-tester and A.C. magsers etc.)

Electronics: Different types of symbol used in electronic circuits, color code of resistors and capacitors, concept of conductor, semiconductor and insulator, emission of electron, thermo ionic valves, principles of operation & applications of semiconductor diode, zener diode, LED, LCD, LDR, Photo diode. Transistors: (bipolar and FETs), silicon controlled rectifier (SCR), DIAC, TRIAC Characteristics and application of CB, CE & CC and class (ABC) amplifiers, feedback in amplifiers, oscillators, inverters, clipping & clamping ckts, timer, voltage regulators. . OP-amp, digital logic gates (combination and sequential) and its truth table, basic idea about microprocessors, different types of sensors and transducer, strain, pressure, temperature, speed and torque measurement, Microcomputer based systems & Industrial robots.

LPE-214: ELECTRICAL AND ELECTRONIC ENGINEERING PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40 Course final examination 60

1. Measurement of high resistance by megger and bridge megger.
2. Calibration of voltmeter, ammeter and watt hour meter.
3. Measurement of voltage, current and power by voltmeter and wattmeter.
4. Measurement of internal resistance of a storage cell.
5. Measurement of resistance of a bulb in (i) cold and (ii) hot condition.
6. Star and delta connection of three phase circuit.
7. Connection of a three phase transformer in an AC circuit.
8. Connection of one lamp controlled by single way switch and by two way switch.
9. Connection of two lamps with the main to work as series with no switch and parallel with switch.
10. Connection of a fluorescent lamp controlled by a switch.
11. Connection of an electric bell controlled from two points with lamp indication.
12. Changing of storage battery from DC mains.
13. Detection of defects of DC and AC.
14. Study of AC and DC starters.
15. Load test of a DC motor.
16. Speed control of a three phases induction motor.
17. Measurement of self-inductance by Raleigh's method.
18. Study the characteristic of a general purpose & Zener diode.
19. Study the characteristic of a transistor in CB configuration.
20. Study the characteristic of a transistor in CE configuration.
21. Study the characteristic of a single stage amplifier.
22. Study the basic characteristic of logic gates.
23. Study the basic characteristic of SCR, LDR & TRIAC,
24. Study the basic operation of Microprocessors.
25. Study the basic operation of different sensors & Transducers.

LPE- 215: INDUSTRIAL MANAGEMENT FOR LEATHER PRODUCTS MANUFACTURE

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Definition of Management- scope, importance, functions, principles, objectives and their attainments- social responsibilities, historical evolution, management process, skills, roles, effectiveness and efficiency.

Planning: Nature and meaning, importance, types, steps, process, tool and techniques, limitation.

Organizing: Definition, principles, importance, types of structures, delegation and decentralization, authority, span of supervision.

Leading: Definition of directing, importance, principles, consultative direction, coordination need, aids, means, motivation, theories, types of needs, means, motivation level in Bangladesh, definition of leadership, theories, and styles.

Controlling: Meaning, types, methods, process, requirements, budgetary control.

Environment: Internal and external, components, merits and demerits.

Global management: Nature and characteristics, management of multinational corporations (MNCS), role of recipient countries, demerits, problems for developing countries like Bangladesh.

Industrial policy of Bangladesh: Nationalization, privatization, foreign investment, role of MNCS, export processing zone, problems of industrialization in Bangladesh, ways to overcome, Government role.

Technology transfer: Definition of technology, types, appropriate technology-technology policy and base, lessons from Japan, Malaysia, Korea, Pakistan, India. Drawbacks of technology transfer.

Management structure in Bangladesh: Features of financial and industrial management, patterns, problems, measures, prospects.

LPE- 216: COMPUTER GRAPHICS DESIGN

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

Adobe Photoshop

Work area: using tools, viewing images, working with palettes.

Basic photo corrections: Resolution and image size, straightening and cropping an image, adjusting the tonal range, removing a color cast, replacing colors in an image, adjusting lightness with the dodge tool, adjusting saturation with the sponge tool.

Selections: making selections, moving selection contents, selecting with the magic wand tool, selecting with the lasso tool, transforming a selection, selecting with the magnetic lasso, cropping an image and erasing within a selection.

Layer basics: Layers, rearranging layers, editing text, flattening and saving files, creating a layer set and adding a layer.

Masks and Channels: Creating a quick mask, editing a quick mask, saving a selection as a mask, editing a mask, loading a mask as a selection and applying an adjustment, extracting an image, applying a filter effect to a masked selection, creating a gradient mask.

Retouching and repairing: repairing areas with the clone stamp tool, pattern stamp tool, healing brush and patch tools, retouching on a separate layer.

Painting and editing: custom workspace, blending an image with the background, changing image with the history tool, brush tool.

Basic pen tool techniques: paths and pen tool, drawing straight paths, drawing curved paths, combining straight and curved path segments, editing anchor points, using paths with artwork, adding layers to complete the effect.

Creating special effects: automating a multi step task.

3D Studio Max

Introduction: MAX interface, customizing MAX interface

Objects: Referencing External objects, Importing and Exporting, Cloning objects and using arrays, selecting and grouping objects, modifying objects.

Modeling: creating primitive objects, working with spline shapes, meshes, creating patches, creating loft objects, building compound objects.

Materials and Maps: material editor, material maps.

Lights and Cameras: Controlling lights, lighting special effects, controlling cameras, camera matching and tracking.

Particle systems and space wraps: creating and controlling particle systems, space wraps, particle system special effects.

Model systems: Building linked hierarchies, schematic view, creating an inverse kinematics system.

Animation: Animation basics, track view, animating with controllers, expressions, dynamic simulation.

Rendering and post production: Backgrounds, environments and atmospheric effects, setting rendering parameters, render effects.

AutoCAD

Getting familiar with AutoCAD, understanding the drafting tools, Drawing 2D objects, editing AutoCAD objects, editing with the modify panel tools, Drawing fundamentals:

Use of line, circle, square, rectangle, triangle, ellipse, polygon.

Creating 3D drawings, getting organized with layers, using blocks, groups, design center, creating text, using dimensions, gathering information, laying out and painting drawing.

**UNIVERSITY OF DHAKA
BANGLADESH**

**DETAILED GUIDE LINES AND SYLLABUS
FOR
B. Sc. in LEATHER-PRODUCTS ENGINEERING**

(FOUR YEARS COURSE)

THIRD YEAR

Approved by Academic Council
University of Dhaka

**Institute of Leather Engineering and Technology
University of Dhaka, Hazaribagh, Dhaka-1209.**

RULES AND REGULATIONS APPLICABLE FOR
INSTITUTE OF LEATHER ENGINEERING AND TECHNOLOGY
DEPARTMENT : LEATHER PRODUCTS ENGINEERING

C. ACADEMIC RULES

1. The Institute of Leather Engineering and Technology (ILET), Hazaribagh, Dhaka shall be deemed to be an institute of the University of Dhaka.
2. The degree to be awarded by the University of Dhaka shall be designated as B. Sc. in Leather Products Engineering.
9. The Courses for the B. Sc. in Leather Products Engineering shall extend over four academic years.
10. The medium of instruction and examination shall be in English.
11. Every year there will be an admission test for new intakes. The rules and regulations and other necessary works for the admission purpose will be performed by the central admission committee of the University.
28. Candidates for admission to the first year B. Sc. in Leather Products Engineering shall be required to have passed the Higher Secondary Certificate in Science with Physics, Chemistry and Mathematics or its equivalent from a recognized Board or Institution. Foreign students with requisite qualification may be admitted with the approval of the University of Dhaka.
29. Admission to the first year B. Sc. in Leather Products Engineering programme shall be based on the results of S.S.C. and H.S.C. or its equivalent examinations and the admission test to be conducted based on current rules by the Central Admission Committee.
30. The detail syllabus for degree of Leather Products Engineering shall be approved by Academic Council of the University of Dhaka.
31. An Examination Committee for each year consisting of 4 (four) members of which 3 (three) shall be internal and 1 (one) from other departments of the Institute or the university or research organization shall be constituted by the departmental academic committee. Any full time teacher of the concerned department of the institute shall be the chairman of the Examination Committee.
32. There shall be a Departmental Academic Committee consisting of all the full-time teaching staff to help academic matters.
33. Every year before the commencement of Academic session the list of part time teachers (if required) shall be prepared course wise and must be approved by the dean of the concern Faculty of Dhaka University. Dean will have the right to modify the list with the consultation with the concern head of the department and the Director of the institute.

34. The question paper setters and the examiners will be selected by the Examination Committee from a panel approved by the University.
35. The question papers shall be moderated by the Examination Committee.
36. No candidate shall be eligible for degree of B. Sc. in Leather Products Engineering unless he or she has undergone the approved courses of study for a minimum period of four academic years and maximum of six academic years.
37. There shall be 15, 1-class hour lectures for 1 credit of theory classes. There shall be 30 hour lectures for 1 credit of Practical classes. Each of the class duration is 50 minutes.
38. No student shall be allowed to study any other degree programme during his/her study in Institute of Leather Engineering and Technology.

B. CURRICULUM AND EXAMINATION RULES

17. The subjects to be studied and the scheme of examinations for B. Sc. in Leather Products Engineering courses are given in Annexure-A.

18. There shall be a final examination at the end of each academic year to be conducted by the University of Dhaka.

19. Two examiners, of whom one will be the course teacher and the others, shall be from other departments of the Institute or University or research organization. The average of two will be taken as final. In case of the difference of more than 20% marks between the two examiners, the script/scripts will be evaluated by a third examiner appointed by the Examination Committee from the approved panel and the average of nearest two marks will be taken as final. In the case of equal difference between the marks of three examiners the middle marks will be taken as final.

22. Final practical examinations will be conducted jointly by Four examiners, 3 (three) internal and 1 (one) external appointed by the examination committee.

23. Grades and grade points will be awarded on the basis of marks obtained in the written, oral or practical examinations and/or laboratory performance according to the following scheme:

Marks Obtained (%)	Grade	Grade Point
80-100	A ⁺	4.0
75-79	A	3.75
70-74	A ⁻	3.50
65-69	B ⁺	3.25
60-64	B	3.00
55-59	B ⁻	2.75
50-54	C ⁺	2.50
45-49	C	2.25
40-44	D	2.00
Marks Obtained (%)	Grade	Grade Point
<40	F	0.00
	I	Incomplete
	W	Withdrawn

A student obtaining 'D' or higher grade will be counted as credits earned by him/her. A student obtaining 'F' grade will not be counted towards his earned credits.

The GPA (grade point average) will be calculated according to the following formula:

$$\text{GPA} = \frac{\sum (\text{Grade points in a course} \times \text{Credits for the course})}{\text{Total credits taken}}$$

CGPA = Cumulative GPA for different years.

22. The total performance of a student in a given course is based on continuous assessment and course final examinations.

- (i) For theory courses the assessment is made through in-course assessment, and final examinations;
- (ii) The assessment of laboratory and / or field courses will be made through observation of the student at work, viva-voce, assignments and evaluation of practical reports.

An examination committee for each year shall be constituted at the beginning of the session.

The distribution of marks for a course will be as follows:

(a) Theory courses:

In-course assessment: 30% of total marks shall be taken as in-course assessment. 5% marks will be awarded on the basis of attendance as follows:

90% and above	5%
85% to less than 90%	4%
80% to less than 85%	3%
75% to less than 80%	2%
60% to less than 75%	1%
Less than 60%	0 (Zero)

(ii) Course final examination 70% of total marks

(iii) Continuous assessment 40% of total marks for practical courses

(iv) Practical Final Examination 60% of total marks

(b) In-course assessment for theory courses: In-course assessment will be done by taking class tests.

- (i) Maximum duration of in-course tests will be one class hour.
- (ii) Questions for in-course tests may preferably be of multiple choice (MCQ) type. Students may also be evaluated using short questions as decided by the course teacher.
- (iii) At least one test for 2 credits hour courses and two tests for 3 or 4 credit hour courses will be taken.
- (iv) Course teachers must announce results within 4 weeks of holding the examination.
- (v) The course teacher will show the assessed in-course scripts to the students.
- (vi) Marks for in-course assessment must be submitted by the course teacher to the Chairman of the Examination Committee and Controller of Examinations before holding the final examination.

(c) Continuous assessment for Practical courses: Continuous assessment will be done on the basis of class performance, report writing and class attendance.

(d) Year-final examination (Theory & Practical courses):

- (i) Student having attendance 75% or more (Collegiate) are eligible to appear in the final examination.
- (ii) Students having attendance 60-74% are eligible for sitting in the final examination on payment of fees as decided by the University.
- (iii) Student having attendance less than 60% are not allowed to sit in the final examination.
- (iv) The year final examination will be conducted centrally by Controller of examinations as existing system.

(v) The duration of theoretical examinations will be follows:

Credit	Duration of theory examinations
4 credit theory course	4 hours
3 credit theory course	3 hours
2 credit theory course	2.5 hours

(vi) Duration of practical examinations will be from 4-6 hours irrespective of credit hours.

- (vii) For final examinations, there will be two examiners: first examiner will be one of the course teachers and the second examiner will be other departments of the Institute or University or Research organization. Evaluation will be made under the existing rule.
- (viii) Marks for final examination will be evaluated by broad and short answer questions. Practice of giving options should be avoided as far as possible.

23. A student has to take the required courses for a particular year, appear at the annual examination and score a minimum specified GPA/CGPA to be promoted to the next year.

Promotion to the next year will be given if a student scores minimum GPA/CGPA as follows:

1 st year to 2 nd year:	GPA	2.00	(D)
2 nd year to 3 rd year:	CGPA	2.25	(C)
3 rd year to 4 th year:	CGPA	2.25	(C)

24. The requirements for the award of the Bachelor of Engineering degree are as follows of the Department:

- (i) Completion of the courses for the minimum required credits in a maximum period of six academic years;
- (ii) Appearing at the final examination in all the required courses;
- (iii) Scoring a CGPA of 2.5, after considering the grades of improvement Examinations.

25. A student must complete his/her studies for a Bachelor's Degree within a maximum period of six academic years.

26. Improvement/retake will be followed by:

- (i) If students obtain a grade C+ or lower in a course in any year, he/she will be allowed to repeat the term-final examination only once with the following batch for the purpose of grade improvement, but he/she will not be eligible to get a grade better than 'B+' in such a course. A student failing to improve his/her grade in a course can retain the earlier grade.
- (ii) Grade improvement will not be allowed in those courses in which a student obtains grade better than 'C+'.
- (iii) A student will be allowed to repeat a maximum of 20 credits in four years B.Sc. Program for grade improvement purpose.
- (iv) Improvement Examination will be taken only for term-final test. No improvement examination will be taken for in-course, practical course, field work, assignment and oral presentation.

27. (i) A course in which a student has obtained 'D' or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained 'F' grade will not be counted towards his earned credits.

(ii) A student who obtains 'F' grade in a course will be allowed to improve the grade two times with any following batches with a condition that he/she has to complete the Bachelor of Engineering Program within period of 6(six) academic years from the date of first admission.

(iii) 'F' grade will not be counted for GPA calculation. But will stay permanently on grade sheet and Transcript. When a student will repeat a course in which he/she previously obtained 'F' grade, he/she will not be eligible to get grade better than 'B+' (grade point 3.25) in such a course.

28. Readmission will be followed by:

- (i) A student may seek re-admission provided he/she has at least 30% attendance in the present year and may continue studies as a regular student.
- (ii) On re-admission grade earned earlier by a student in the class of re-admission shall in general cease to exist and the student has to retake all courses and examination but in case if they do not get the opportunity to repeat the courses due to late admission, marks of in-course assessment and laboratory performance assessment in the previous year may be retained by the students.

29. Drop out will be followed by:

A student failing to earn the yearly GPA for promotion from one year to next year after taking improvement / readmission in any year shall be dropped out of the program.

30. Dean's Award will be followed by:

As a recognition of excellent performance, the names of students obtaining an average CGPA of 3.75 or above in an academic year without appearing any improvement examination may be Published in the list of Dean's award of the Faculty.

31. The failed candidates may seek readmission into the concerned classes on payment of usual fees except university registration fee or may appear in the concerned examination irregular candidates provided they have passed in all practical subjects on payment of examination and center fees as fixed by the University. The marks obtained by the irregular candidates in the practical examinations; in-course assessment and the project work (if applicable) in the earlier session shall be counted in deciding the results of their examinations.

32. The University may from time to time revise, amend or change rules and regulations and scheme of examinations and syllabus. In the case of students already undergoing the course, the changes will take effect from the beginning of the following academic year after the changes are introduced and shall cover the part of the courses that remain to be completed.

33. In the case of any dispute in interpretation of the rules and regulations regarding the degree programme of B.Sc. in Leather Products Engineering, the decision of Academic Council of the University of Dhaka shall be final.

LPE: 301: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS-III

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Background: History of leather product, pre history of Renaissance /Renaissance to industrial revolution, Industrial revolution to the present day.

Clothing: Introduction, Clothing culture and communication, the individual and dress, fashion men's /women's wear, materials, choosing patterns, cutting patterns, fitting garments, stitching.

Clothing Design: Development of a collection, fashion, fashion accessories, elements of cutting, types of cutting, cutting of straight lines, curves, diagonal, cutting of various patterns with notches, importance of notches, lining cutting.

Jacket: Different parts of simple jacket, pattern control, matching of leather grain and color, area necessary, cutting of a simple jacket, control of cutting jackets, cutting of lining, size and models

Waist Coat: Construction of basic waist coat block, Different parts of waist coat, Classification of different waist coat. Modification and design development of different waist coat.

Skirt: Different parts of simple skirt, ladies straight skirt, construction of basic skirt block, pleats construction, grading for skirts, modification in basic skirt, design & construction of flayed skirt-paneled skirt, components attachment -pockets-pleats.

Trouser: Different parts of a simple trouser, basic trouser block, construction of trouser with pleats, components attachment-zip, safari jacket, collar construction, sleeve construction, modification to basic block, design & pattern making, fabrication.

Children's wear: Liberty cap, sun hat, ankle sock, tight, pants, bib, tee shirt, leggings.

Boys and Girls wear: Plain suit, splash suit.

Men's and Women's wear: Slicker, princess line coat, duster, wrap over/clutch, frock coat, pelerine, logger's cruiser utility.

Medium leather goods:

Ladies bags, School; bags, college bags

7. Batsford - Fashion with leather.

LPE 302: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS –III PRACTICAL

Class per week	Credit	Marks
4	4	Continuous assessment : 40, Course final examination 60

Jacket:

Pattern construction and manufacturing of different jackets

Waist Coat:

Construction of basic waist coat blocks, Manufacturing of different waist coat

Skirt:

Construction of basic skirts block, Manufacturing of different skirts

Trouser:

Construction of basic trousers block, Manufacturing of different trousers

Children's wear:

Construction of basic children wear block, Manufacturing of different children dresses, liberty cap, sun hat, ankle sock, tights, pants, bibs, tee shirts, leggings.

Boys and Girls wear:

Construction of basic boys and girls dress blocks, Manufacturing of different dresses for boys and girls

Pockets:

Manufacturing of different pleated pocket and flap, gusset pocket and flap, Piping pocket, False pocket.

Collars:

Pattern construction and manufacturing of different collars

Medium leather goods:

Pattern making, assembling and sewing of Ladies bags, School bags, college bags

References

LPE-303: ANALYTICAL CHEMISTRY FOR LEATHER PRODUCTS MANUFACTURE-I

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Evaluation of analytical results, accuracy and precision, errors, minimization of errors, significant figure and computation, rejection of data- the Q test. Sampling.

Gravimetric and volumetric methods: Principles of gravimetric methods, conditions for precipitation co-precipitation and post-precipitation, precipitation from homogeneous solution. Principles of volumetric analysis, Acid-Base titration, complexometric titration, precipitation titration, oxidation-reduction titration. Determination of end point.

Chromatographic techniques: Introduction, principles, classification of chromatographic methods, instrumentation and application of paper, thin layer chromatography (TLC) and high performance liquid chromatography (HPLC). Application in leather science.

Analytical spectrometry: *Ultraviolet /Visible spectroscopy:* Introduction, absorption laws, deviation from Beer's Law, instrumentation, principles, applications, molar extinction coefficient, measuring unknown concentration, absorbing species, absorption spectrum and λ_{MAX} , application of transmission spectrophotometry to dyes. *Reflectance spectrophotometry-* Introduction, principles, Kubelka-Munk equation, reflectance measurement, instrumentation, determination of surface colour of solid substrates, application of reflectance spectrophotometry for the surface colour determination of leather.

Thermal techniques Differential thermal analysis (DTA), Differential scanning calorimetry (DSC), Thermogravimetry (TG): Basic principles and application in leather science.

Chemical analysis of leather and related chemicals: *Tanning materials-* Routine analysis of vegetable, analysis of chrome extract: Cr_2O_3 , basicity.

Analysis of leather- vegetable tanned leathers: moisture, oils and fats, water solubles, insoluble ash, nitrogen and hide substance, degree of tannage, pH of water solubles, oxidized fat, combined fat, differential number, glucose, total ash, epsom salt, analysis of chrome tanned leather; Leather auxiliaries: casein, shellac, oils, fats, and waxes: moisture, acid value, saponification value, iodine value, unsaponifiable matter; determination of sulphide in alkaline liquors, determination of chlorides in alkaline liquors, determination of total available strong alkali.

Environmental analysis: Sampling procedures of waste water for analysis. Analysis of tannery wastewater sample: pH, alkalinity, acidity, total solids, dissolved solids, suspended solids, sulphate, sulphide, chromium, settleable solid.

Laboratory automation: Introduction, approaches to laboratory automation, principles of automation, planning for laboratory automation, automated instruments, microprocessor-controlled instruments: "smart" instruments, computers in analytical chemistry.

Safety practice in laboratory: Introduction, MAK values of working material that involved health hazard, list of harmful materials, carcinogenic working materials, emission protection law, danger symbols, regulations concerning the transportation of materials classified as dangerous goods, prevention of accidents and first aid in laboratory, hazard and hazard agents identification, hazard

classification, hazard control, safety management, safety promotion and awareness creation, safety and emergency provisions.

LPE-304 - ANALYTICAL CHEMISTRY FOR LEATHER PRODUCTS MANUFACTURE PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

1. Determination of fats, oils and other solubles.
2. Determination of water-soluble matter, water -soluble inorganic matter and water-soluble organic matter.
3. Determination of sulphated total ash and sulphated water-insoluble ash.
4. Determination of nitrogen and hides substance from different types of leather.
5. Determination of chromium content from different types of leather.
6. Determination of chromium content from different commercial chrome tanning agents.
7. Determination of sulphide from sodium sulphide.
8. Test for the identification of vegetable tanning materials.
9. Determination of moisture/total solids/ total solubles/non-tannin constituents/insolubles/colour/ pH from vegetable tanning materials.
10. Determination of moisture/ soluble matter/ ash/ alkalinity of ash/ pH/non-tannin of hide powder.
11. Determination of sulphur dioxide in bleaching extracts.
12. Determination of iron and copper in vegetable tanning extracts.
13. Determination of strong alkali in solution.
14. Determination total available strong alkali.
15. Determination of acid /iodine value of oil/fat.
16. Determination of unsaponifiable matter.
17. Determination of chloride content from alkaline liquor.
18. Determination of unknown concentration of dye solution.
19. Determination of thermal response of raw hide/limed pelt/pickled pelt/tanned/Crust leather/ finished leather.
20. Determination of dissolved solid/ suspended solid/total solids from wastewater sample.

LP.E 305 LEATHER TECHNOLOGY-I

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Histological structure and chemical composition: Structure of raw hides and skins. Structural difference between hides and skins of different origin, chemical composition of hides and skins
Slaughtering and procurement of hides & skins: Slaughtering and flaying of animals, tools, equipment and techniques for slaughtering and flaying, hides and skins of slaughtered and fallen animals, cares to be taken during flaying, handling and storage of raw hides and skins, collection practice in Bangladesh.

Preservation / curing of hides and skins: Introduction, objectives and principles of preservation, short and long terms preservation, methods of preservation/curing, advantages and disadvantages of different types of curing, factors affecting preservation / curing process.

Defects of hides and skins: Definition, pre-mortem and post-mortem defects of hide and skin and their effect on leather, methods of identification of defects, common defects of hides and skins in Bangladesh and their remedies.

Sorting and gradation of raw hides and skins: Principles; objectives, methods of sorting and grading of hides and skins, importance of sorting and grading in leather processing.

Beam house operations: Introduction and role of beam house operations in leather making.

Soaking: Objectives and different controls in soaking operation. different methods of soaking.

Liming: Chemistry of unhairing, unhairing by different methods, objectives of liming, effects of liming of collagen, enzymatic controls in liming operation to achieve different physical properties of leather.

Deliming and Drenching: Objectives, principles and controls of deliming and drenching.

Bating: Chemistry of proteolytic enzymes used for bating, necessity of bating, Its preparation and controls for desired properties of leather.

Pickling: Acid binding capacity of collagen, use of organic acids or salts in pickling, its necessity and controls, concept of, depickling.

Degreasing: Objects and necessity of degreasing, different systems and methods.

Tanning: Basic concept, theoretical background, tanning potentials of various metals, non-metals, natural and synthetic materials, tanning characteristics, hydrothermal stability and shrinkage temperatures of various tanning materials

Chrome tanning: Historical development, chromium complexes, theories of chrome tanning, factors affecting chrome tanning, basicity and its effect on chrome leather production, masked and self-basified chrome tanning and their advantages and disadvantages

Other tanning Operations

Aluminum and titanium tanning, Vegetable tanning, Synthetic tanning, Aldehyde tanning, Oil tanning.

LP.E 306 LEATHER TECHNOLOGY-I PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

1. Manufacturing of Clothing leather/garments leather.
2. Manufacturing of Fur skin leather.
3. Manufacturing of Screen/block printed leather.
4. Manufacturing of Glaze kid leather.
5. Manufacturing of Nubuck leather.
6. Manufacturing of Nappa leather/ suede leather.

LPE-307: TESTING OF LEATHER PRODUCTS AND ALIED MATERIALS

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Objects of carrying out physical testing of leather, few popular thumb tests for upper leathers, disadvantage of thumb tests, classification of physical testing methods.

Sampling: Introduction, statistical aspects of the sampling problem, collection of samples, sections of raw hides and skins and of leather, sampling positions, conditioning of test pieces.

Strength and stretch of leather: Tensile strength and elongation, stitch tearing strength, tearing strength, tongue tearing strength, buckle tear strength, split tear strength, distension and strength of grain by ball burst test, effect of splitting on strength, area stability, effect of relative humidity, effect of oil content, effect of kind of tannage and method of finishing, measurement of the initial strain energy of leather, temper of leather, resilience properties of leather.

Tests for upper and lining materials: Flexing endurance test, principles of flexing, water vapours permeability test, Improving of WVP of upper leather, Water Vapour Absorption and Water vapour coefficient, Wrinkelometer test. air permeability of leather, dynamic water proofness test, principles of water proofness test, shrinkage temperature, control of shrinkage temperature, Martindale abrasion test, chisel scuff resistance, softness test, how to improve scuff resistance, dry and wet rub fastness, the gray scale.

Tests for finish film: Introduction, bond strength between the leather surface and the finish film, how to improve this bondage, heat resistance of finish film, cold crack resistance, light fastness of finish film, wet and dry rub fastness, test for bleeding, water fastness, elasticity of finish film, resistance to solvent, resistance to washing and cleaning agents, resistance to dressing agents, resistance to water stains, moisture fastness, resistance to plasticizer, resistance to buffing of suede leather, resistance to ageing.

Tests for Soling Materials: Apparent and real densities, abrasive resistance, absorption of water by kubelka method, dynamic water proofness test of sole leather, resistance to cracking of grain crack index, why sole leather cracks and how to pervert it, perspiration resistance of leather, how to improve perspiration resistance of leather, Relative porosity. Hydrolysis test, Flexing test (SATRA BATA Ross flex, Bennewart flex) compression set test, adhesion test oil swelling resistance test.

Test for Insole and other Accessories: Insole: Flexing Index, Tensile strength and extension at break, scuff resistance, peel strength, Laminar strength, Water uptake, water absorption and desorption. Laces: Breaking strength and elongation at break, Bodkin attachment strength, abrasion resistance, lace to eyelet abrasion test.. Velcro: Peel test, shear resistance. Hook, Eyelet's, D-Rings: Attachment in leather, corrosion test, Breaking strength. Buckles: Corrosion test, Tensile strength, strength buckle and strap attachment. Top piece: Top piece attachment strength. Stiffener and Toe puffs: Tear strength, Adhesion strength, Shanks: Longitudinal stiffens.

Tests for safety Footwear: Impact resistance of toecap, compression resistance, electrical resistance. Penetration resistance of metal insole. Upper/outsole and sole interlayer bond strength, insulation against heat, insulation against cold, resistance to fuel oil, corrosion resistance of metallic part.

L.E-308: TESTING OF LEATHER PRODUCTS AND ALIED MATERIALS PRACTICAL

Class per week	Credit	Marks
1	2	Continuous assessment : 40, Course final examination 60

1. Determination of tensile strength and % of elongation at break.
2. Determination of tear strength / stitch tear strength / tongue tear strength/ split tear strength.
3. Determination of flexing endurance.
4. Determination of water-vapor permeability of leather.
5. Determination of water vapor absorption and their co-efficient.
6. Determination of scuff, heat, bending resistance of leather.
7. Determination of wash fastness, of leather used in products manufacture.
8. Determination of break/pipiness/wrinkles of supplied leather.
9. Determination of adhesion of finish film of supplied finished.
10. Different strength tests of adhesive.
11. Different thread tests.
15. Different tests of accessories.
16. Determination of softness for upper leather.

LPE-309: cOMPUTER aIDED dESIGN AND PATTERN MAKING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Industrial automation: Definition, types of automation, development of automation, development of computers, application of computers to manufacturing.

Computer-integrated manufacturing (CIM): Principles of CIM, essentials of computer-integrated manufacturing systems, effectiveness of CIM, advantages and disadvantages of CIM.

Computer-aided design (CAD) : Introduction to CAD and its application in different sector of leather products, foot wear technology in brief., fundamental concepts on coordinate systems; draw line, square, rectangle, triangle, etc. using absolute and incremental system, application to simple operations like moving, copying, rotating, trimming, breaking etc. linear, angular and aligned dimensioning system, CAD facilities; Geometric modeling- 2D And 3D models, surface models, solid models; methods of optimum design. Computer-automated process planning, automated manufacturing planning-function involved in AMP, computer- aided routing (CAR), CAR system. **CAD/CAM:** Principles and scope of CAD hardware & software in CAD and introduction to CAM, NC, CNC devices for computer aided cutting including laser and water jet, computer aided stitching, Digitization: 2D and 3D coordinate extraction, principles of digital to analog conversion, digital input/output processing systems, programming techniques and languages, computerized techniques, principles and strategies for collection of data for imaging, rendering, data reduction and processing techniques with special reference for different designs, CAD/CAM system-integrating CAD and CAPP. Automatic machine tools for mass production; computer-controlled manufacturing systems; automated assembly, automatic materials handling, industrial robots, industrial robots in manufacturing.

CAD for leather-products: Introduction to input and out-put devices required for CAD and their working principles for leather-products and footwear manufacturing; Capabilities of CAD for styling purposes-color, basic primitives; etc.; use of 2D and 3D techniques for leather products designing, panel design and grading, pattern production; scrap materials calculation.

CAM for Leather-products: Tools required in CAM; applications of CAM in leather-products manufacturing.

LPE-310: cOMPUTER aIDED dESIGN AND PATTERN MAKING PRACTICAL

Class per week	Credit	Marks
2	2	Continuous assessment : 40, Course final examination 60

Manufacturing Techniques of the following items-

Leather Goods:

1. Leather Key rings (Triangular, Rectangular, Circular, Pentagon, Polygon etc.)
2. Leather Mobile cover
3. Address-card holder in leather material
4. Leather Money Bag
5. Leather Vanity Bag
6. Leather Belts for Gents

Leather Garments:

1. Men's wear preparation and Grading techniques:

- a) Block preparation.
- b) Bolero type waistcoat
- c) Gilet type waistcoat

2. Women's wear preparation and Grading:

- a) Block preparation.
- b) Ladies jacket
- c) Skirt grading.

3. Preparation of various types of bags.

Different Size Modifications

LpE-311: Footwear Technology

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Human Foot: Function of foot, types of foot, normal foot, foot's section, Foot Anatomy- Bones, muscles, tendons, ligaments, nerves and blood vessels, joint, arches, skin etc. foot anatomy of infants and children, development of human foot from infants to adult-characteristic features of infant, children and adult foot, Biometry of the human foot, details of foot parameters. Foot Measurement- Necessity, Biometry, foot parameters and measuring procedure.

Footwear: Definition, history of footwear, foot gear, Purpose of footwear, comfortable footwear, types of footwear – oxford, derby, moccasin, mule, boot, sandal, clog, pump, safety footwear, occupational footwear, sports shoe styles and fashion of footwear, features of comfortable shoes, shoes and foot ills, Shoe Anatomy- Shoes section, parts of upper and lining, out soles, mid sole, counter, box toe, footwear components- toe puff, stiffener, insole, shank piece, heel, welt, ornaments and fittings, foot and footwear care.

Last : Last and it's importance, difference between last and feet, last features for different styles of footwear, classification of last, , defects of last, measurement of last, symmetric and asymmetric lasts, custom made last, after care of last/storage of last

Shoe sizing and Fitting: Principle of shoe sizing, history of shoe sizing, length size , shoe size classification- UK shoe sizing, parish point, American shoe sizing, centimeter scale, Mondo point, comparison among different shoe sizing systems, conversion of sizes from one scale to another, standardize shoe sizes, fitting- definition and Principles ,different fitting systems.

Cutting: Definition of Cutting, Principles of Cutting, Cutting of upper components, Hand cutting tools, Hand cutting process, Press cutting, Clicking press knives, environmental factors, Storage of knives, Modern clicking presses, Advantages of various types of cutting machines, press cutting process, Safety method of clicking, Comparison between hand cutting and machine cutting, Sorting of leather for cutting.

Closing: Definition, preparatory operations- identification marking, notch marking, size and marking, stitch marking, Lining stamping, Punching/Perforation, Gimping, Blocking, Preforming, Reinforcing, Embossing, Crimping , Splitting, Skiving, Edge coloring, Burnishing, Folding, Binding, Top line treatment, Eyeleting, Punching, Edge burnishing etc.

Lasting: Definition, functions of lasting, principle of lasting, methods of lasting, hand lasting procedures.

Features and constructions: Sandal, court shoe, oxford shoe, derby shoe- selection of materials, designing and pattern cutting, materials cutting, assembling, closing and lasting and sole attaching.

Shoe room and finishing: The aims and objects of finishing and their utility, upper leather dressing, cleaning and shoe lacing, upper leather cleaning and dressing, fitting the sock, shoe lacing and packaging.

LPE-312: Footwear Technology Practical

Class per week	Credit	Marks

1. Identification of shoes, identification of parts and components of shoes.
2. Foot measurement and foot impression taking techniques.
3. Identification of bones, nerves, muscles from skeleton and model.
4. Handling and introduction of working tools of footwear.
5. Mean forme-making technique, dead forme, standard making.
6. Working pattern making technique
7. Sandal making: Toe peg, toe band, v-strap, instep- band, crossed bands, multi-straps.
8. Attachment of straps of sole.
9. Baby shoe making, slipper making, fancy ladies sandal making
10. Sandal making – Toe peg, Toe band, V-strap, instep-band, Crossed bands, multi-straps.
11. Men's Shoe making- Oxford shoe, Gibson/Derby shoe, Brogue shoe, Monk shoe, Army boot, Riding boot, orthopedic shoe, miner's boot, moccasin, Slippers.
12. Women's Shoe Making- Fancy shoes, Court shoe, Mule, Bar Shoe, Tie Shoe, Ankle Strap, Sling- back.

LPE-313: INDUSTRIAL AND PRODUCTION ENGINEERING FOR LEATHER PRODUCTS MANUFACTURE

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Metal Casting Processes: casting processes for ferrous and non-ferrous metals; sand, die, centrifugal, slush, plaster mold, loam mold, precision investment casting etc. casting defects, design of moulds, riser, gate sprue and core, cost analysis, metals for casting, product design considerations.

Bulk Deformation Processes in Metal Working: rolling and other deformation processes related to rolling, forging and other deformation processes related to forging, extrusion and other deformation processes related to extrusion, wire and bar drawing.

Sheet Metal Working: cutting operations, bending operations, drawing, other sheet metal forming operations, deep drawing, dies and presses for sheet metal processes, sheet metal operation not for performed on presses, bending of tube stock.

Material Removal Processes: single point cutting tool, chip formation in metal machining, types of chips, various operations performed on turning, milling, drilling, shaping, grinding, broaching etc., cutting tool materials and cutting fluids, tool wear and tool life, economics of machining.

Leather Products Manufacturing Machines and their Maintenance: Cutting section; Hand-Operated leather cutting machine, hydraulic clicking press, traveling head/sewing arm cutting machine. Leather splitting machine, stamping and numbering machine for lining, strap cutting machine, cutting plotter, drawing plotter, cutting knife production unit, stitch marking machine. Sewing section: skiving machine, liner edge folding machine, use of various types of sewing machine for leather products manufacture, zigzag sewing machine, cylinder bed sewing machine for bag profiling and wallets, flat bed single & double sewing machine, post bed single & double needle sewing machine, ornamental sewing machine, light sewing and heavy duty sewing machine, button stitch machine, seam rubbing and taping machine, thread burner, upper leather perforating machine, eyeleting machine, punching and riveting machine, binding machine. Closing section: binding machine, belt-finishing machine, belt-folding marking machine, embossing machine, trimming machine, edge coloring machine, edge polishing machine, fusing machine, buffing machine, ironing machine, spiral cutting machine, leather and plastic auto-weaving machine, humidifier.

Standardization: Introduction, product simplification and diversification, interchangeability, selective assembly, principles, preparation of standards, application of standards in design and manufacturing, applying for patents, international and national standard organization.

- ii) Production Process-Degarmo
- iii) Production Process- Dole
- iv) Manufacturing Process-Kalpakjain

LPE-315: MANAGERIAL ECONOMICS

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Managerial economics: Introduction to macro and micro, nature and scope, theories and constructions, firm goals, firm size, location of firm, fundamental concepts and techniques for business decisions.

Demand and supply analysis: Meanings, laws, exceptions, types, determinants and elasticity of demand and supply, demand forecasting for consumer durable like leather, theory of production and supply.

Determination of Prices and Profits under different market conditions: Perfect competition, monopoly and oligopoly costs of production and distribution, pricing practices with special reference to leather, decision making under risk and uncertainty.

Market economy: Meaning, features, markets and prices, operation, dominance of developed countries, impact on developing countries, impact on the economy and industrialization process of Bangladesh.

Monetary policy: Fiscal policy, inflation, devaluation, budgets of Bangladesh, monetary policy for export oriented industries-specially for leather, footwear, leather products, hand- gloves, leather garments, horns and hooves and other by-products based industries, matching grant funds and other special funds for leather, footwear and leather products industries, incentives and other financial supports for leather, footwear and leather products sectors.

Documentation for international business: Up to date govt. documents: export-import policy, monetary policy, duty on import & export, L/C opening, clearing & forwarding, shipment, value added tax (VAT), tariff and non-tariff barriers etc.

Plant & production costing: Selection of machines, cost involved in production system, machine depreciation, material costing, costing for individual item, competitiveness, local & international market price, labor & manpower cost, other overhead cost, cost involved in export/import of goods, gross profit & net profit, break-even point and Merchandising.

**UNIVERSITY OF DHAKA
BANGLADESH**

**DETAILED GUIDE LINES AND SYLLABUS
FOR
B. Sc. in LEATHER-PRODUCTS ENGINEERING**

(FOUR YEARS COURSE)

FOURTH YEAR

Approved by Academic Council
University of Dhaka

**Institute of Leather Engineering and Technology
University of Dhaka, Hazaribagh, Dhaka-1209.**

RULES AND REGULATIONS APPLICABLE FOR
INSTITUTE OF LEATHER ENGINEERING AND TECHNOLOGY
DEPARTMENT : LEATHER PRODUCTS ENGINEERING

D. ACADEMIC RULES

1. The Institute of Leather Engineering and Technology (ILET), Hazaribagh, Dhaka shall be deemed to be an institute of the University of Dhaka.
2. The degree to be awarded by the University of Dhaka shall be designated as B. Sc. in Leather Products Engineering.
12. The Courses for the B. Sc. in Leather Products Engineering shall extend over four academic years.
13. The medium of instruction and examination shall be in English.
14. Every year there will be an admission test for new intakes. The rules and regulations and other necessary works for the admission purpose will be performed by the central admission committee of the University.
39. Candidates for admission to the first year B. Sc. in Leather Products Engineering shall be required to have passed the Higher Secondary Certificate in Science with Physics, Chemistry and Mathematics or its equivalent from a recognized Board or Institution. Foreign students with requisite qualification may be admitted with the approval of the University of Dhaka.
40. Admission to the first year B. Sc. in Leather Products Engineering programme shall be based on the results of S.S.C. and H.S.C. or its equivalent examinations and the admission test to be conducted based on current rules by the Central Admission Committee.
41. The detail syllabus for degree of Leather Products Engineering shall be approved by Academic Council of the University of Dhaka.
42. An Examination Committee for each year consisting of 4 (four) members of which 3 (three) shall be internal and 1 (one) from other departments of the Institute or the university or research organization shall be constituted by the departmental academic committee. Any full time teacher of the concerned department of the institute shall be the chairman of the Examination Committee.
43. There shall be a Departmental Academic Committee consisting of all the full-time teaching staff to help academic matters.
44. Every year before the commencement of Academic session the list of part time teachers (if required) shall be prepared course wise and must be approved by the dean of the concern Faculty of Dhaka University. Dean will have the right to modify the list with the consultation with the concern head of the department and the Director of the institute.

45. The question paper setters and the examiners will be selected by the Examination Committee from a panel approved by the University.
46. The question papers shall be moderated by the Examination Committee.
47. No candidate shall be eligible for degree of B. Sc. in Leather Products Engineering unless he or she has undergone the approved courses of study for a minimum period of four academic years and maximum of six academic years.
48. There shall be 15, 1-class hour lectures for 1 credit of theory classes. There shall be 30 hour lectures for 1 credit of Practical classes. Each of the class duration is 50 minutes.
49. No student shall be allowed to study any other degree programme during his/her study in Institute of Leather Engineering and Technology.

B. CURRICULUM AND EXAMINATION RULES

17. The subjects to be studied and the scheme of examinations for B. Sc. in Leather Products Engineering courses are given in Annexure-A.

18. There shall be a final examination at the end of each academic year to be conducted by the University of Dhaka.

19. Two examiners, of whom one will be the course teacher and the others, shall be from other departments of the Institute or University or research organization. The average of two will be taken as final. In case of the difference of more than 20% marks between the two examiners, the script/scripts will be evaluated by a third examiner appointed by the Examination Committee from the approved panel and the average of nearest two marks will be taken as final. In the case of equal difference between the marks of three examiners the middle marks will be taken as final.

23. Final practical examinations will be conducted jointly by Four examiners, 3 (three) internal and 1 (one) external appointed by the examination committee.

24. Grades and grade points will be awarded on the basis of marks obtained in the written, oral or practical examinations and/or laboratory performance according to the following scheme:

Marks Obtained (%)	Grade	Grade Point
80-100	A ⁺	4.0
75-79	A	3.75
70-74	A ⁻	3.50
65-69	B ⁺	3.25
60-64	B	3.00
55-59	B ⁻	2.75
50-54	C ⁺	2.50
45-49	C	2.25
40-44	D	2.00
Marks Obtained (%)	Grade	Grade Point
<40	F	0.00
	I	Incomplete
	W	Withdrawn

A student obtaining 'D' or higher grade will be counted as credits earned by him/her. A student obtaining 'F' grade will not be counted towards his earned credits.

The GPA (grade point average) will be calculated according to the following formula:

$$\text{GPA} = \frac{\sum (\text{Grade points in a course} \times \text{Credits for the course})}{\text{Total credits taken}}$$

CGPA = Cumulative GPA for different years.

22. The total performance of a student in a given course is based on continuous assessment and course final examinations.

- (i) For theory courses the assessment is made through in-course assessment, and final examinations;
- (ii) The assessment of laboratory and / or field courses will be made through observation of the student at work, viva-voce, assignments and evaluation of practical reports.

An examination committee for each year shall be constituted at the beginning of the session. The distribution of marks for a course will be as follows:

(a) Theory courses:

In-course assessment: 30% of total marks shall be taken as in-course assessment. 5% marks will be awarded on the basis of attendance as follows:

90% and above	5%
85% to less than 90%	4%
80% to less than 85%	3%
75% to less than 80%	2%
60% to less than 75%	1%
Less than 60%	0 (Zero)

- (ii) Course final examination 70% of total marks
- (iii) Continuous assessment 40% of total marks for practical courses
- (iv) Practical Final Examination 60% of total marks

(b) In-course assessment for theory courses: In-course assessment will be done by taking class tests.

- (i) Maximum duration of in-course tests will be one class hour.
- (ii) Questions for in-course tests may preferably be of multiple choice (MCQ) type. Students may also be evaluated using short questions as decided by the course teacher.
- (iii) At least one test for 2 credits hour courses and two tests for 3 or 4 credit hour courses will be taken.
- (iv) Course teachers must announce results within 4 weeks of holding the examination.
- (v) The course teacher will show the assessed in-course scripts to the students.
- (vi) Marks for in-course assessment must be submitted by the course teacher to the Chairman of the Examination Committee and Controller of Examinations before holding the final examination.

(c) Continuous assessment for Practical courses: Continuous assessment will be done on the basis of class performance, report writing and class attendance.

(d) Year-final examination (Theory & Practical courses):

- (i) Student having attendance 75% or more (Collegiate) are eligible to appear in the final examination.
- (ii) Students having attendance 60-74% are eligible for sitting in the final examination on payment of fees as decided by the University.
- (iii) Student having attendance less than 60% are not allowed to sit in the final examination.
- (iv) The year final examination will be conducted centrally by Controller of examinations as existing system.

(v) The duration of theoretical examinations will be follows:

Credit	Duration of theory examinations
4 credit theory course	4 hours
3 credit theory course	3 hours
2 credit theory course	2.5 hours

(vi) Duration of practical examinations will be from 4-6 hours irrespective of credit hours.

(vii) For final examinations, there will be two examiners: first examiner will be one of the course teachers and the second examiner will be other departments of the Institute or University or Research organization. Evaluation will be made under the existing rule.

(viii) Marks for final examination will be evaluated by broad and short answer questions. Practice of giving options should be avoided as far as possible.

23. A student has to take the required courses for a particular year, appear at the annual examination and score a minimum specified GPA/CGPA to be promoted to the next year.

Promotion to the next year will be given if a student scores minimum GPA/CGPA as follows:

1st year to 2nd year: GPA 2.00 (D)

2nd year to 3rd year: CGPA 2.25 (C)

3rd year to 4th year: CGPA 2.25 (C)

24. The requirements for the award of the Bachelor of Engineering degree are as follows of the Department:

(i) Completion of the courses for the minimum required credits in a maximum period of six academic years;

(ii) Appearing at the final examination in all the required courses;

(iii) Scoring a CGPA of 2.5, after considering the grades of improvement Examinations.

25. A student must complete his/her studies for a Bachelor's Degree within a maximum period of six academic years.

26. Improvement/retake will be followed by:

(i) If students obtain a grade C+ or lower in a course in any year, he/she will be allowed to repeat the term-final examination only once with the following batch for the purpose of grade improvement, but he/she will not be eligible to get a grade better than 'B+' in such a course. A student failing to improve his/her grade in a course can retain the earlier grade.

(ii) Grade improvement will not be allowed in those courses in which a student obtains grade better than 'C+'.

(iii) A student will be allowed to repeat a maximum of 20 credits in four years B.Sc. Program for grade improvement purpose.

(iv) Improvement Examination will be taken only for term-final test. No improvement examination will be taken for in-course, practical course, field work, assignment and oral presentation.

27. (i) A course in which a student has obtained 'D' or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained 'F' grade will not be counted towards his earned credits.

(ii) A student who obtains 'F' grade in a course will be allowed to improve the grade two times with any following batches with a condition that he/she has to complete the Bachelor of Engineering Program within period of 6(six) academic years from the date of first admission.

(iii) 'F' grade will not be counted for GPA calculation. But will stay permanently on grade sheet and Transcript. When a student will repeat a course in which he/she previously obtained 'F' grade, he/she will not be eligible to get grade better than 'B+' (grade point 3.25) in such a course.

28. Readmission will be followed by:

(i) A student may seek re-admission provided he/she has at least 30% attendance in the present year and may continue studies as a regular student.

(ii) On re-admission grade earned earlier by a student in the class of re-admission shall in general cease to exist and the student has to retake all courses and examination but in case if they do not get the opportunity to repeat the courses due to late admission, marks of in-course assessment and laboratory performance assessment in the previous year may be retained by the students.

29. Drop out will be followed by:

A student failing to earn the yearly GPA for promotion from one year to next year after taking improvement / readmission in any year shall be dropped out of the program.

30. Dean's Award will be followed by: As a recognition of excellent performance, the names of students obtaining an average CGPA of 3.75 or above in an academic year without appearing any improvement examination may be Published in the list of Dean's award of the Faculty.

31. The failed candidates may seek readmission into the concerned classes on payment of usual fees except university registration fee or may appear in the concerned examination irregular candidates provided they have passed in all practical subjects on payment of examination and center fees as fixed by the University. The marks obtained by the irregular candidates in the practical examinations; in-course assessment and the project work (if applicable) in the earlier session shall be counted in deciding the results of their examinations.

32. The University may from time to time revise, amend or change rules and regulations and scheme of examinations and syllabus. In the case of students already undergoing the course, the changes will take effect from the beginning of the following academic year after the changes are introduced and shall cover the part of the courses that remain to be completed.

33. In the case of any dispute in interpretation of the rules and regulations regarding the degree programme of B.Sc. in Leather Products Engineering, the decision of Academic Council of the University of Dhaka shall be final.

LPE – 401: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS -IV

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Fabrication Technology of Leather Products: Introduction, preparatory process, Bench operations, Creasing, edge dyeing or staining, punching, riveting, eyeletting, cementing, edge folding. marking, stamping, embossing. construction method and assembling.

Lining material & their use: Silk, satin, velvet, rayon, poplin, moirette/silkette, fabric of mercerized cotton, printed cotton, drill, laminate, Polyesters, wool and far, quality, Polynesia.

Stiffened articles: Flat stiffened work, gusseted pocket, compound gusset, step gusset, turned edged articles, simple card case, envelope case, turned edged wallets.

Box work: Hinges and fastenings, box covering, jewel box lining large box work,

Assembling component parts on leather goods articles: Applying cement adhesives, Assembling materials and semi-produced articles, Trimming edges, Assembling rigid hand bags.

Sewing Machinery : Field of application, Stitch types, Materials feed system, Feeding mechanism, Classification of sewing machine.

Construction of Gussets: Introduction, types of gussets, plain gusset, "V" gussets, flat gussets, three parts gussets (plain), three parts gussets (double).

Bags: types of bag, Materials for bags, tools and equipment for bags manufacture, no-gusset bag shapes, one-gusset bag shapes, two-gusset bag shapes, joining one-and two-gusset bags, attaching straps to gussets, flap fastening, pockets, pockets, making a one-gusset bag pattern, making stitch holes, attaching gussets, box-type bag, general working order, bag fastening-tongue and loop, double tongue and loop, loop and toggle, loop and bead/toggle/button strap and buckle, turn lock, draw string, zips, flaps and straps.

Wallets: Introduction, types & use, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

Executive bags: Introduction, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

Passport case: Introduction, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

Gents lunch bag: Introduction, raw materials, perspective drawing, list of components, measurement instruction, total pattern making, leather consumption, splitting and skiving instruction, construction and assembling.

H upholstery: Introduction, tools, materials, frames, stripping upholstery, use of foam, upholstered stools, 'Drop-in 'loose seats, occasional and dining chairs, restoration of antique chairs, pouffes, replacing springing and webbing, stile and collar cutting, planning and cutting covering material, buttoning, show-wood upholstery, fluting, refurbishing wing easy chair, re-upholstery of chippendale period easy chair, re-upholstery of a victorian-style buttoned-back chair, restoration of a victorian twist-leg chair, upholstery of bed headboards.

Outer and Inner wear : ladies jacket, Waiste coat, Blazer, Men's parka, Children wear, Collar and sleeve construction, Neck line, hem lines variations, Assembling of different components.

Materials handling : Automated handling system, hand push movable trolleys, electromechanically power conveyors.

Trouble Shooting: Defects identification in different steps of Leather Products manufacture and their remedies.

Health and safety: Fire- fire risk & prevention / precaution, types of combustion & risks, fire fighting methods & equipments, Hazards- Solvent hazards, mechanical & electrical hazards; ventilation & working environment, ergonomics, fatigue, accidents factors, lighting methods, Occupational safety & health act.

LPE – 402: MANUFACTURING TECHNOLOGY OF LEATHER PRODUCTS –IV PRACTICAL

Class per week	Credit	Marks
4	4	Continuous assessment : 40, Course final examination 60

1. Manufacturing of Gent's belt.
2. Manufacturing of zippered purse, jewelry wallet,
3. Manufacturing of picture frame,
4. Manufacturing of waist coat.
5. Manufacturing of Playing card box.
6. Manufacturing of Various types of ladies bags.
7. Manufacturing of wallets.
8. Manufacturing of File folder.

9. Manufacturing of Diary cover.
10. Manufacturing of Tissue Box
11. Manufacturing of Table decorations,
12. Manufacturing of Executive bag.
13. Manufacturing of Gents lunch bag
14. Manufacturing of Passport case.
15. Manufacturing of Hand gloves.
16. Manufacturing of Fitted skirt.
17. Manufacturing of Gourd Skirt.

lpE - 403: Analytical Chemistry for LEATHER PRODUCTS MANUFACTURE--II

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Chromatography:

Ion-exchange methods: Introduction, ion-exchange resins, synthetic organic ion-exchangers, use of ion-exchange resins. Anion and cation exchange resins, properties of ion exchange resin, application of ion-exchange resins, ion-exchange chromatography, ion-exchange columns, application of ion exchange chromatography, ion -chromatography.

Gas chromatography: Introduction, classification, principles of gas-liquid chromatography, gas-solid chromatography, techniques of gas-liquid chromatography, carrier gas, sample injector, gas chromatograph columns and detectors: different types of detectors- thermal conductivity detector (TCD), flame ionization detector (FID), electron capture detector (ECD), nitrogen/phosphorus detector (NPD), qualitative and quantitative, Application of gas-liquid chromatography in leather industries.

High-Performance liquid chromatography: Basic concept, comparison of HPLC with gas-liquid chromatography, apparatus for HPLC, solvent delivery, sample injector, selection of column Different detectors:- UV & RI detectors, Qualitative and quantitative analysis, effect of temperature in HPLC, application of HPLC.

Spectrometry:

Infrared spectrometry: Principles, instrumentations and applications.

Nuclear magnetic resonance spectrometry: Principles, instrumentations and applications.

Mass spectrometry: Principles, instrumentations and applications.

Atomic absorption spectrometry: Introduction, basic principles, instrumentation, effect of flame temperature, chemical & spectral interference, recent developments, applications.

Surface characterization by spectroscopy and microscopy: Introduction to the study of surfaces, spectroscopic surface methods, scanning electron microscopy, scanning probe microscopes, principles involved in the morphological investigation on leather and polymers, imaging techniques for surface applications, ESCA, Auger spectroscopy.

Particle size measurements: Introduction, working principles, qualitative and quantitative information, applications.

Environmental analysis: Introduction, Banned amines, Identification of carcinogenic amine from a mixture of dyes, identification of benzidine-based dye, *Air pollution in Tannery*-determination of volatile organic compound (VOC), formaldehyde content in finishing area, Total Organic carbon (TOC) analyzer and its application for determining TOC, determination of COD & BOD of tannery effluent.

Chemical analysis of leather and related chemicals: Introduction, *Tanning materials*-routine analysis of synthetic tanning materials, analysis of alum tanning agents; formaldehyde.

Analysis of leather- analysis of alum tanned leather; formaldehyde tanned leather. Leather auxiliaries: analysis of sulphated oils: moisture, acid value, soaps, organically combined SO₃ existing as neutralized sulphuric esters and as neutralized sulphonic esters, sodium sulphate, sodium chloride, unsaponifiable matter, qualitative identification of surface active groups, determination of hydroxyproline in materials containing collagen.

LPE-405: DESIGN AND PATTERN MAKING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Art & Design: definition, idea and discussion on art, design, motif, fashion, style, fads, craze, newness, crafts. Application of design, style, fashion, motif in leather products. Exploration of design, source and influence available for a leather products design, sketching variety of products styles and design covering men's and women's wear in 2D and 3D, effective use of line, shape, color, pattern, and texture on leather products, presenting design themes, stimulating presentation or balanced, logical and readable solutions.

Free hand drawing: Line (straight and curve), triangle, circle, ellipse, rectangle, Tone (silver tone, first tone, second tone, third tone,) Composition, Proportion, Illustration using water colour, Poster colour, Colour pencil, Pastel colour. Different colour terms, Theory, vision, matching, Basic scheme, 3-dimensions, subjective nature of colour vision. Motif analysis, Drawing composition, Design in dimension, Texture fixation, Colour composition in design creativity analysis. Products sketching technique.

Design and techniques for leather products: Planning the design and selecting the skin, creating a design/spec sheet. Elements of design-line, space, value color, texture, composition. Line in leather design-preparation of leather for line, tracing. Use of body proportions, leather and other materials in garments manufacture, visual and verbal analysis, assignment of finished garment. Boutique, screen print, applique techniques

Design Analysis: Subjective judgment taste and aesthetics subjectivity, Objectivity; High and low cultural values in design, Means of production Changing language from craft workshops to factory assembly line, Criticism in Fashion design Issues of luxury and utility. The value of design Costing and negotiating design project, Market segmentation, Demographic and psychographics design implication for different customer groups, aspects of consumer /buyer behavior, Customer profiles, Customer needs and wants, Pricing strategies, Method of distribution retail, Mail order and future strategies. Designers problem of a personality perspective.

Concepts of patterns: Introduction, concept of patterns, procedure of making various types pattern, transferring patterns, placement of pattern. rectangular pattern, curved pattern.

Product development: Procedure of product development, story board, theme board, colour board preparation, motif analysis, logo design, value addition, research and inspiration, cultural value in design.

Style and design variations: Block preparations of men's women's and children clothing. Panel styling and perspective design implements, Different Sleeves, Collars, Necklines, Hemlines, Facings, Button-stands designing and style variations.

Modifications: Lowered armhole adaptation, extend and dropped shoulder adaptation (body with sleeve and yoke).

Pattern Grading for men's and women's clothing: Introduction, history, size and measurements, system development, grading methodology,

Enlargement: System of enlargement, body measurement and system analysis for enlargement procedure and calculations followed by standard sizing charts.

LPE-406: DESIGN AND PATTERN MAKING PrACTICAL

Class per week	Credit	Marks
2	2	Continuous assessment : 40, Course final examination 60

Manufacturing Techniques of the following items-

4. Men's wear preparation and Grading techniques:

- a) Block preparation.
- b) Bolero type waistcoat
- c) Gilet type waistcoat

5. Women's wear preparation and Grading:

- a) Block preparation.
- b) Ladies jacket
- c) Skirt grading.

6. Preparation of various types of bags.

7. Different Size Modifications

LPE-407: POLYMER SCIENCE AND ENGINEERING

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Polymeric materials: Definition and classification of polymers, chemistry and mechanism involved in different polymerization process such as stepwise, addition, ring opening, free radical polymerization, polymerization techniques-Bulk, solution, suspension and emulsion polymerization. Co-polymerization, anionic and cationic polymerizations. Chemistry & Technology involved in - Natural & synthetic rubber, PVC, polystyrene, PU, LDPE & HDPE polypropylene, EVA, ABS, acrylics, fibre reinforced plastics, poromerics /PVC or PU coated fabrics. Polymeric materials as adhesives and binders.

Macromolecules: Introduction, classification, structure of macromolecules in solid and solution state.

Structure and properties of polymers: Chemical and geometrical structure of polymer molecules, glass transition temperature and related topics of polymers properties, crystallinity in polymers.

Properties of commercial polymers: Introduction, polyamide and related polymers, phenol-formaldehyde polymers, urea-formaldehyde polymers and melamine-formaldehyde polymers, cellulose and related polymers, silicones, epoxies and biopolymers.

Polymers Degradation and Environmental issues: Introduction, types of degradation, management of plastics in the environment, polymer recycling, incineration, biodegradation, impact on environment of various types of polymers.

Polymers, additives, blends and Composites: Additives, plasticizer, filler and reinforcements, other important additives, polymer blends and interpenetrating networks- polymer blend.

Polymers used in Leather, Footwear and Leather products industry: Introduction, important polymers used in leather industry and application in leather processing.

Polymer processing: Basic processing operations, Plastic technology, Fibre technology, Elastomer technology.

LPe-408: POLYMER SCIENCE AND ENGINEERING PrACTICAL

Class per week	Credit	Marks
2	2	Continuous assessment : 40, Course final examination 60

1. Identification of polymers use in leather, footwear and leather products manufacturing.
2. Determination of chemical compositions of selected polymers.
3. Determination of ionic character of selected polymers and surfactants.
4. Determination of viscosity of acrylic, polyurethane, butadiene binders.
5. Determination of electrolyte stability of acrylic, polyurethane, butadiene binders.
6. Determination of solvent stability of acrylic, polyurethane, butadiene binders
7. Determination of film hardness of acrylic, polyurethane, butadiene binders.
8. Determination of adhesive strength of acrylic, polyurethane, butadiene binders.
9. Determination of tensile strength and elongation of the finish film formation by acrylic, polyurethane, butadiene binders
10. Determination of ironing effect of acrylic, polyurethane, butadiene binders
11. Determination of flexibility of finish film based on acrylic, polyurethane, butadiene binders.
12. Determination of water resistance of finish film based on acrylic, polyurethane, butadiene binders, silicones based compounds and nitrocellulose based compounds
13. Chromatographic analysis of plasticizer.

LPE-409: ENVIRONMENTAL SCIENCE AND POLLUTION CONTROL

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Environment and ecology: Introduction, components of environment, factors affecting environment.

Tannery and environment: Tanning process and their environmental implications, major process sequences, chemical inputs and wastes -curing of hides and skins, beam house operations, tanning, post tanning activity - wet and mechanical processes, and finishing.

Water pollution: Introduction, definitions of water pollution, sources of water pollution, different types of water pollution and their harmful impacts on ground and surface water, factors affecting surface water pollution, classification of water pollutants and effects of the various types of pollutants.

Air pollution: Introduction, composition of air, sinks of atmospheric gases, chemical reactions occur in different spheres, smog formation in air, major sources of air pollution and impact on the environment, global and modeling climate change, green house gases and green house effect, acid rain and its effect, air pollutant and their characteristics, hazardous air pollutant (HAPs).

Soil pollution: Introduction, sources of soil pollution, detrimental effects of soil pollutants, disease caused by soil pollution, treatment of soil pollutants, control of soil pollution.

Waste management: Definition of waste, integrated waste management, waste generation, separation, storage, collection, transformation of solid waste, transfer and transport, disposal water and air pollution control. Purification and reuse of water during leather processing, low float techniques using updated equipment, recycling of individual process liquors. International standard and exposure limits.

Recovery, regeneration, reuse and disposal of tannery wastes: Recovery of residues of effluents, organic materials, dissolved salts, energy, solid waste, recycling of lime /sulphide liquors, dehair, high chrome exhaustion techniques in chrome tanning, chrome recovery and recycling, oil and grease recovery, disposal of effluents

Biodegradability and biodegradation: Introduction, methods of measuring biodegradation, characteristics of tannery discharges, biological treatment of tannery effluents.

Tannery chemicals and waste generated in different tanning operations: Introduction, brief discussion of different types of chemicals used in leather processing.

Impact of tannery discharge on receiving waters: Introduction, presentation of receiving water and techniques used, results obtained and physico-chemical study, biological study and results obtained, specific analysis of chromium traces.

Pollution due to sulfur, chlorine and nitrogen: Introduction, ecotoxicity of chlorine, nitrogen and sulfur compounds; sulfur, chlorine and nitrogen in tannery effluents, study of effluents and treatment plants, balance in residual baths, tests for demonstrating nitrification.

Ecotoxicology: Introduction, toxic hazards and their control, controls of substance hazardous to health, hazard evaluation, risk assessment and control.

Safety manual on leather processing: Introduction, chemical safety, raw material handling, ranking of chemicals based on their hazard potential, storage instructions for hazardous and other chemicals, use of safety wares or personal protective equipment, upkeep of working and working surfaces.

Treatment technology: General outline of treatment-necessitated processes, types of treatment. Introduction, principle of pre, primary and secondary treatments, screening, settling. Chemical precipitation, removal of grease and oil, sulphide liquors, chromium, solid waste, primary treatment plant. Sedimentation tank, trickling filters system, biological fluidized beds. Different types of technologies used for the treatment of tannery wastes, primary and secondary treatment plant tertiary and quaternary treatment of tannery wastes.

Environmental Law and Industrial Pollution: Environmental pollution control, enforcement, monitoring and auditing, technical services government and industry policies, self-regulations by industry

LPE-410: ENVIRONMENTAL SCIENCE AND POLLUTION CONTROL PRACTICAL

Class per week	Credit	Marks
2	2	Continuous assessment : 40 Course final examination 60

1. Determination of chloride content in alkaline solution.
2. Test for the identification of surface active groups.
3. Determination of bio-chemical oxygen demand from wastewater sample.
4. Determination of chemical oxygen demand from wastewater sample.
5. Determination of particle size and shape of supplied pigments.
6. Determination of chromium (VI) content from spent liquor using UV-VIS Spectrophotometer
7. Determination of Penta-chlorophenol using High Performance Liquid Chromatography
8. Determination of extractable fat content from leather sample
9. Identification of Phenolic components from leather using High Performance Liquid Chromatography
10. Identification of banned amines from leather using High Performance Thin Layer Chromatography

LPE-411: LEATHER TECHNOLOGY-II

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Tanning: Introduction, vegetable tanning- hydrolysable tanning and condensed tanning, resin tanning, synthetic tanning, aldehyde tanning, chrome-vegetable combination tanning.

Mechanical operation prior to post tanning operation: Sammying, splitting, shaving,

Re-chroming & Neutralization : Re-chroming- Objectives, chemicals used for rechroming, influencing factors for rechroming operation, Neutralization- Objectives, chemicals used for neutralization, influencing factors of neutralization, quality control during neutralization.

Retanning: Objectives, chemicals used for retanning, influencing factors of the retanning operation, quality control during retanning.

Dyeing & Fat liquoring : Dyeing- objectives, dyes and their classification, selection of dyes for specific leather production, influencing factors of the dyeing operation.

Fat liquoring- Objectives, selection of fat-liquors and oils, influencing factors of the fat-liquoring operation, quality control during fat -liquoring.

finishing: Definition, Classification of finishes, Structure of finishes, Materials for leather finishing, Theory of film formation Preparation of leather for finishing-buffing, snuffing, de-dusting, flesh coating, staining/color impression, ground coating, season coating, top coating, ironing, glazing, plating, selection.

Finishing techniques: Shoe upper leather, nappa leather, glaze kid leather, nubuck leather, suede leather, patent leather, corrected grain leather, pull-up leather, clothing leather.

Insole leather: lining leather, split leather.

Sole leather: Vegetable tanned sole leather, chrome tanned sole leather, and combination tanned sole leather.

LPE-412: LEATHER TECHNOLOGY-II PRACTICAL

Class per week	Credit	Marks
4	4	Continuous assessment : 40, Course final examination 60

1. Standard upper leather manufacture
2. Manufacture of suede/nubuck/nappa/chamoise leather.
3. Standard lining leather manufacture
4. Manufacture of glaze kid finish
5. Manufacture of shrunken grain leather
6. Manufacturing process of patent finish leather
7. Manufacture of garments/clothing/gloving leather.
8. Manufacture of fur skin .
9. Manufacture of screen/block/boutik printed leather.

LPE-413: PRODUCTION PLANNING AND QUALITY CONTROL

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Introduction: Concept of production system, scope and importance of production, elements of production, production planning, determination of factors of production and their control.

Productivity concept:

Introduction, productivity of materials, land, building, machine and manpower, factors contributing to productivity improvement.

Techniques for productivity improvement:

Introduction, work content and ineffective time, productivity improvement by reducing work content, productivity improvement by reducing ineffective time, management of productivity.

Work study:

Introduction, basic procedure, prerequisites of conducting a work study, human factors, the influence of working condition, Ergonomics.

Method study:

Introduction, objectives, procedure, record, examine. Develop, flow and handling of materials, tools for recording the movement of worker.

Work measurement:

Introduction, objectives, basic procedure, the techniques, time study, rating, standard time.

Quality: Definition of quality and quality control, important terminology used in quality control, quality function, quality planning and improvement, parameters for fitness for use.

Quality policies and objectives: Need for quality policies, corporate quality policies, quality policies for specific parameters and formulation of quality policies, quality objectives, zero defects.

Total quality management (TQM): Total quality management concept, internalization of quality, customer driven quality activity, system development for TQM, ideal TQM system, application of TQM on leather industry.

Standards for leather products testing: International Standards, national standards, Testing soling materials, Testing adhesives, Testing other products components, Using computers for quality control in the leather products industries.

Quality control for different stages of leather-products manufacturing: Quality control in pattern cutting- cutting of bags, wallets, belts, jackets, dresses etc; quality control during skiving and splitting, closing -cementing, priming, sewing, decoration creating with different accessories; quality control during finishing- spraying, ironing, polishing, handing, storage, preservation, packaging and delivery.

Recommended quality requirements: For leathers or non-leather materials, cotton lining materials, other hidden quality requirement.

Health and safety in leather products manufacture: Hazards and potential accidents, safety measures.

Quality assurance in leather products manufacture: Quality assurance, quality control, raw materials, design department, production planning and control in cutting department, during preparation for sewing, in the sewing room, intermediate inspection, final inspection, cost of quality, cost of conformance, cost of non-conformance.

Quality management systems: Perceptions of quality, development of ISO-9000 series, content and application field of ISO-9000-9004 series.

Environmental management systems: Introduction, ISO 14000 series: structure of the ISO 14001 standard, occupational health hazards and industries, environmental impact assessment (EIA) and audit, environmental audit (EA), environmental management plan.

LPE-415: ENTREPRENEURSHIP AND BUSINESS DEVELOPMENT

Class per week	Credit	Marks
2	3	Course final Exam: 70, In-course assessment: 25, Class Attendance: 5. Total Class: 45

Business- Meaning, element, characteristics, function, importance, advantages, relation with economics

Entrepreneurs- Meaning, function, qualities, factors, role of business entrepreneurs

Business method and Business organization – Meaning, importance, distinction, types, principles, evolution, factors influence

Sole proprietorship business – Meaning, features, advantages, importance, fields suitable for sole proprietorship business

Partnership business - Meaning, element, advantages, disadvantages, contents of Partnership deed, power of Partner, reconstruction of Partnership business, difference between sole trade ship and Partnership business.

Joint Stock Company - Meaning, characteristics, advantages, disadvantages, difference between JSC & Partnership business, classification of JSC & Private and public limited company.

Export Management –_Meaning, Function, Principles,_Factors, types, Leather export: Introduction-A profile of industry- Leather manufacture; basic steps in leather making-Grading – quality control-Animal and tannery by-products-Leather products- Technical aspects of footwear manufacture-Garment construction- Machinery- Role of council for Leather Exports- Schemes for Government for leather Exports; Medium term export Strategy for 2002-2007;EPCG schemes; Duty exemption schemes; Duty remission schemes etc.- Schedule of rates under duty entitlement Pass book scheme and draw back.
